

How to Make an Educational Video with Clipchamp

So, you've got an assignment to make an educational video. Don't worry — you don't need fancy equipment or years of editing experience. With **Clipchamp**, making a video is as easy as dragging, dropping, and having fun.

By the end of this guide, you'll know how to:

- Start a new video project in Clipchamp
- Add video, images, and sound
- Edit like a pro (well, almost!)
- Add fun text, music, and stickers
- Export and share your masterpiece

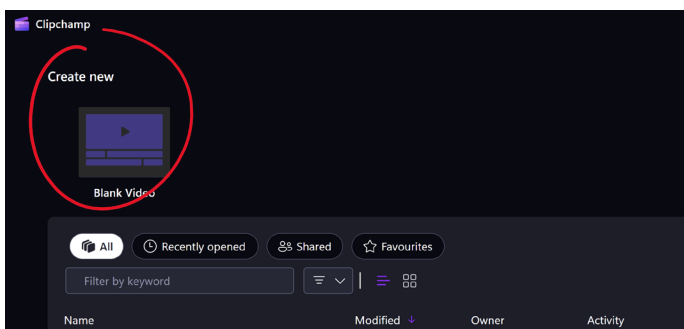

Step 1: Getting Started

1. Go to **clipchamp.com**
2. Log in with your school email or Microsoft/Google account.
3. Click **“Create a new video”**.

Tip: Name your project something simple, like *“The impact of ADHD”* — it makes life easier later!

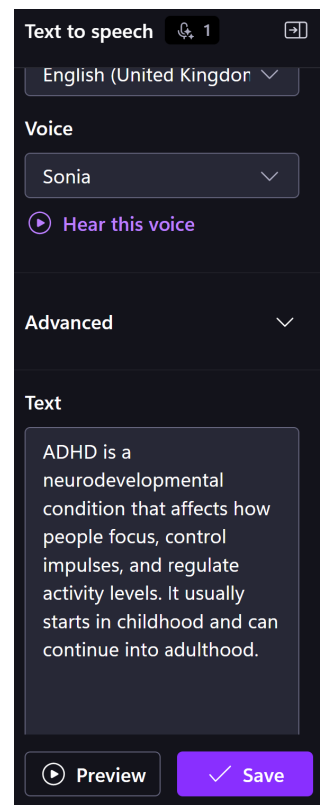

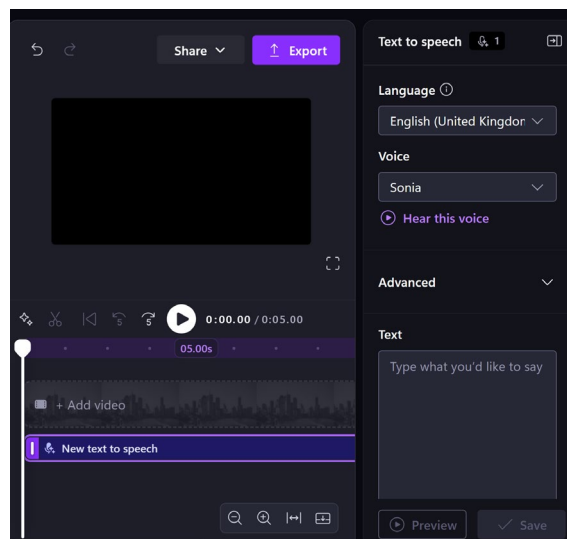

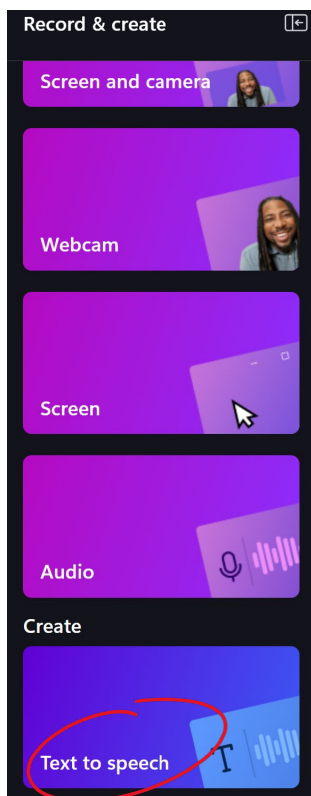

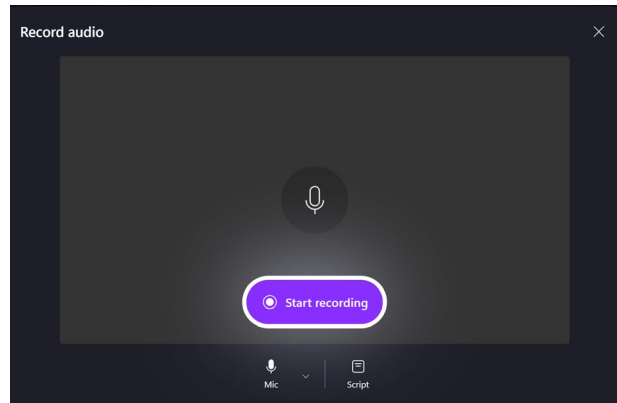

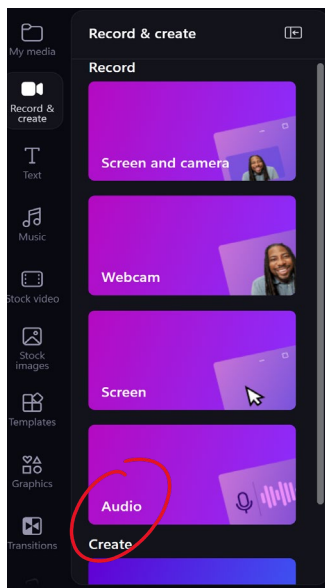

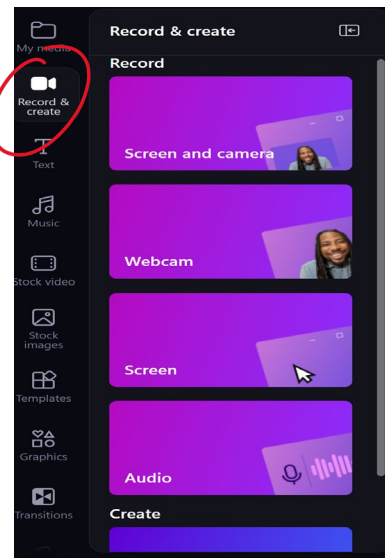

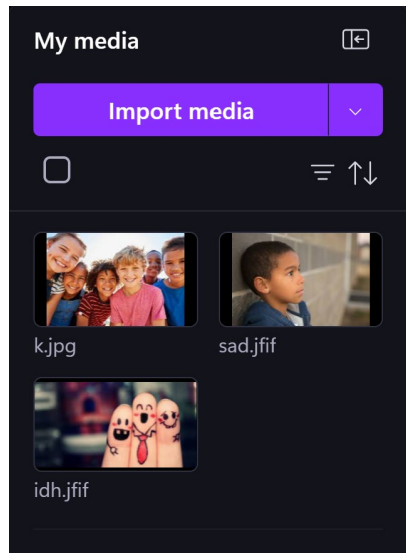

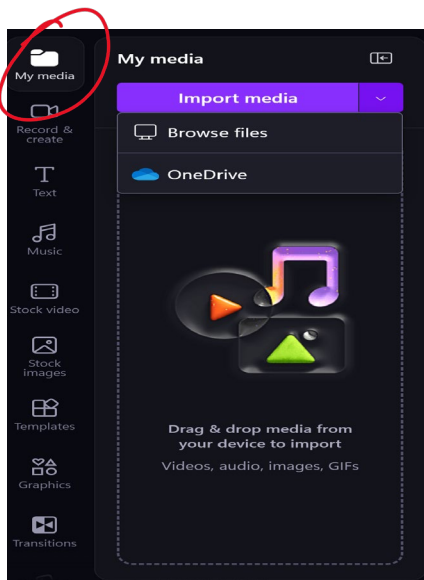

Step 2: Collect Your Stuff

Now it's time to bring in the bits and pieces for your video.

- **Upload videos or images** (from your computer or phone).
- **Record directly** using your webcam or screen recorder.
- **Add audio** (narration, sound effects, or free Clipchamp music).

Tip: Keep all your files in one folder on your computer so nothing goes missing.

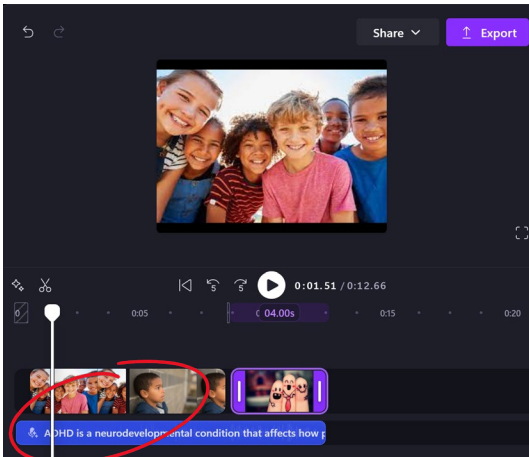

Step 3: Editing Basics

Here's where the magic happens: the **Timeline**.

- Drag clips onto the timeline.
- Use the **scissors tool** to cut out mistakes or boring bits.
- Rearrange clips by dragging them left or right.

 Tip: Short and snappy beats long and sleepy — aim for clear, to-the-point videos!

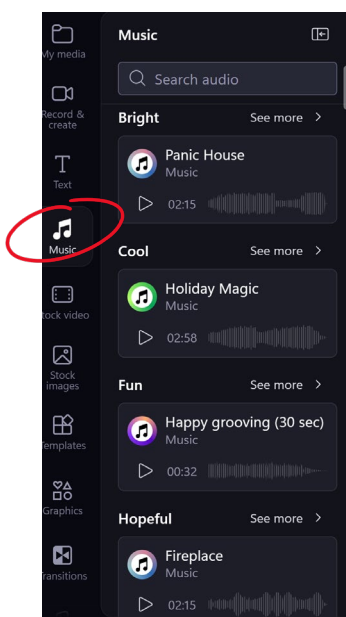

Step 4: Make It Engaging

Now, let's spice it up!

- Add **text titles** for key points.
- Drop in **stickers or transitions** between clips.
- Use **background music** (just keep it quiet so your voice is clear).

 Tip: Use text for keywords so even if the sound is off, people still get the message.

Step 5: Finishing Touches

- Watch your video from start to finish.

- Check for spelling mistakes in text.
- Adjust sound so your voice is easy to hear.

 Tip: Ask a friend to watch it — fresh eyes always catch little errors!

Step 6: Export & Share

1. Click the **Export** button in the top right.
2. Choose **1080p (HD)** for the best quality.
3. Save it to your computer.

Step 7: Sharing Your Video

- Upload to OneDrive – see guide

 Tip: Always double-check file size and format before uploading.

Final Checklist

Before you submit, ask yourself:

- Is the video clear and easy to follow?
- Did I cut out any awkward pauses or mistakes?
- Is the text readable and correct?
- Is the sound balanced (voice louder than background music)?
- Did I export in **1080p** and save it safely?

If you ticked all these boxes...  congrats, you're a video creator!
