

BASIC DIGITAL SAFETY

MAKE SURE YOUR INTERNET CONNECTION IS SECURE

While connecting to public Wi-Fi, make sure your device is protected. If you're unsure, the best option is to wait until you can connect to a secure network before sharing sensitive information, for example, your bank details etc.

DOWNLOAD FILES CAREFULLY

You have to be careful about what you download because viruses and malware may harm your device or steal personal information. Verify the source and scan files with antivirus software before opening them.

CHOOSE A STRONG PASSWORD

Use a hard to remember unique and strong password with mixing numbers, letters and special characters.

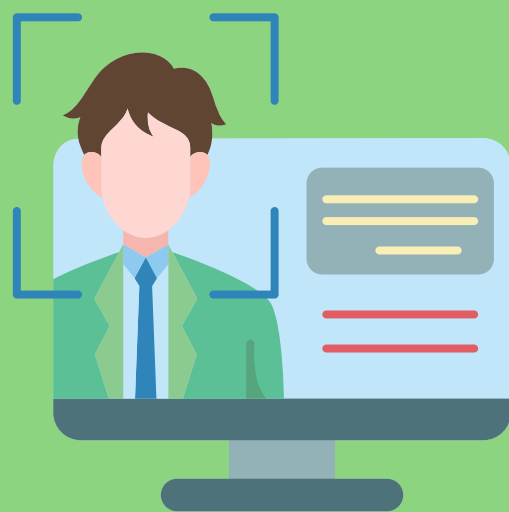

ONLY MAKE ONLINE PURCHASES ON SECURE AND TRUSTED WEBSITES.

Only provide your personal information on websites with secure connections when you are shopping online.

THINK CAREF ABOUT WHO YOU MEET AND WHERE

People online may not always be who they seem to be—and some may not exist in real life. Hackers often use fake social media profiles to exploit users.

DOWNLOAD THE ANTIVIRUS PROGRAM AND UPDATE IT REGULARLY

Downloading and regularly updating antivirus software is crucial to protect your devices from new and evolving threats, ensuring your data and system stay secure.

BE CAREFUL WHAT YOU POST AND WHERE

Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua.

THINK A FEW TIMES BEFORE YOU POST ANYTHING ONLINE

Once something is posted online, it can be difficult to fully remove it. Do not share your personal details.
