Introduction

His report presents the design and building of responsive website created for a classical music concert. The website is designed in the standards of web technologies, HTML and CSS with integrated tooling of website development. With the aim of an application to the multi pages site design and implementation project, which is easy to build, looks good on an interactive screen and is attractive to users from each end when used throughout different devices. The website consists of several parts, including a home page, an about section, a programme page and a ticket booking page. This page was made simple and user friendly due to the consistent layout and navigation of each page. The implementation is also responsive and integrated with navigation, dropdown navigation menus, multimedia, images background audio and simple booking page.

Requirements

1. Purpose:

As an association site, the website helps to promote a classical music concert to the general audience with clear interesting information that should not be misadvised about. The program of the concert, the featured artists that will appear, the venue location and ticket prices is presented under the banner. The website is also built to be a practical example of front-end web development skills where you design a fully functional and responsive web design with HTML and CSS without external development tools.

2. Subject matter:

The website serves as the theme for a classical music concert and has structure to various page areas. The main page, Home, introduces the event and a thorough analysis of the concert is given briefly, including the orchestra itself and the artists who played. The Programme section is the musical selections to be played with works of such composers as Mozart, Beethoven and Tchaikovsky and few lines of the pieces are

detailed below. The About section also describes the concert venue and includes links to social media for additional interaction. The tickets page is meant to promote the user to attend the concert as well as has content that is around the program. The website also has interactive elements like a navigation bar with dropdown menus, image content and background audio to enhance users.

3. Intended audience:

The audience for this website will be classical music fans, concert attenders and people with general interest in any events in London. This kind of website for music lovers, young people in school, tourists, people who would like to go to a concert would be great. The website design is to cater as much for wide user base as possible which should be as simple as possible with easy reading. Responsive design of the site has the capability of be used on different phone and tablet interfaces meaning that the website is accessible on any device.

Implementation

1. Screenshots of the Webpages

1.1. Home page

The Home page, index.html presents the main section with a visually striking concert banner. It serves as visual summary of the concert, the orchestra and solo artists profiles. It features an easy navigation menu of dropdown to browse to other sections of the site.

Figure 1. Home page

1.2. About page

The About page, `about.html` provides detailed information about the Barbican Hall concert venue, including location, main entrance guidance, and social media links. The page highlights key features of the venue and encourages users to stay connected through platforms like Facebook, Instagram, and WhatsApp.

Figure 2. About page

1.3. Programme page

Programme page, `programme.html` presents the full concert schedule, including performances of Mozart, Beethoven, and Tchaikovsky. Each section includes the piece title, soloist or orchestra information, images, and a description of the composition.

Figure 3. Programme page

1.4. Tickets page

The Tickets page, `tickets.html` reflects the layout of the Programme page. Although it does not yet feature an operational ticket booking form. The design, navigation, and content organization remain consistent. As a functional site, this page would enable users to choose ticket categories and make reservations.

2. Validation

2.1. HTML Validation

The HTML file, index.html was initially validated using the W3C Markup Validation Service through the file upload option. The validation reported some errors: the character encoding was not declared, the HTML declaration was missing and lang attribute was missing.

Use the Message Filtering button below to hide/show particular messages, and to see total counts of errors and warnings.

Message Filtering

1.

Warning

This document appears to be written in English. Consider adding `lang="en"` (or variant) to the `html` start tag.

From line 1, column 1; to line 1, column 6

```
<html>␣␣␣␣␣␣<ti
```

For further guidance, consult [Declaring the overall language of a page](#) and [Choosing language tags](#).
If the HTML checker has misidentified the language of this document, please [file an issue report](#).

2.

Error

The character encoding was not declared. Proceeding using `windows-1252`.

3.

Error

Start tag seen without seeing a doctype first. Expected `<!DOCTYPE html>`.

From line 1, column 1; to line 1, column 6

```
<html>␣␣␣␣␣␣<ti
```

Document checking completed.

Used the HTML parser.

Figure 5. Errors index.html page

To resolve these issues, the modifications were applied to the HTML header:
<!DOCTYPE html> declares the document as HTML5, ensuring proper rendering and standard compliance in browsers, <html lang="en"> specifies the primary language of the page, <meta charset="UTF-8"> sets the character encoding to UTF-8, preventing character display errors.

After applying these corrections, the page was validated and no errors were found.

The screenshot shows the Nu Html Checker interface. At the top, a blue header reads "Nu Html Checker". Below it, a note states: "This tool is an ongoing experiment in better HTML checking, and its behavior remains subject to change". The main heading is "Showing results for uploaded file index.html (checked with vnu 26.3.24)". Under "Checker Input", there are checkboxes for "source", "outline", "image report", and "errors & warnings only", along with an "Options..." button. The "Check by" dropdown is set to "file upload", and a "Choose File" button is present. A message says "No file chosen". Below this, it states "Uploaded files with .xhtml or .xht extensions are parsed using the XML parser." and a "Check" button. A green banner at the bottom of the input section says "Document checking completed. No errors or warnings to show." Below the banner, it says "Used the HTML parser." and "Total execution time 10 milliseconds."

Figure 6. HTML code Validation

2.2. CSS Validation

The CSS file, cssstyle.css was validated using the W3C CSS Validation Service through the file upload option, and the validation results showed no errors found, confirming that the stylesheet works.

The screenshot shows the W3C CSS Validation Service interface. The header reads "The W3C CSS Validation Service" and "W3C CSS Validator results for cssstyle.css (CSS level 3 + SVG)". Below the header, a link "Jump to: Validated CSS" is visible. The main heading is "W3C CSS Validator results for cssstyle.css (CSS level 3 + SVG)". A green banner says "Congratulations! No Error Found." Below this, it says "This document validates as [CSS level 3 + SVG](#)!". A note states: "To show your readers that you've taken the care to create an interoperable Web page, you may display this icon on any page that validates. Here is the XHTML you could use to add this icon to your Web page:". Two examples of XHTML code are provided. The first example uses the "Valid CSS!" icon and the second example uses the "Valid CSS!" icon with a blue border.

Figure 7. CSS code Validation

Evaluation

1. Part A

1.1. Website usability

Website usability refers to the ease and efficiency with which a user can explore and engage with a website to achieve their objectives. A high level of usability guarantees that information is accessible, navigation is good, and the interface is responsive and visually [1].

1.2. Website accessibility

Website accessibility involves creating websites that accommodate users with diverse abilities, such as individuals with visual, auditory, motor, or cognitive disabilities. This practice is typically informed by the principles things that means the site need to be perceivable, operable, understandable and robust [2] [3].

1.3. Search engine optimisation

Search Engine Optimisation (SEO) involves optimizing website content and structure to facilitate effective indexing by search engines, thereby increasing visibility in search results. This process employs various strategies such as implementing descriptive meta tags, organizing heading structures, utilizing alt attributes, and creating content that is rich in keywords [4].

2. Part B

2.1. Usefulness (Usability and Utility)

The website provides a very friendly layout of user-friendly navigation menus, easy dropdown options to content and organized way of accessing concert, orchestra, artists

and program details with the use of visual items on cards and headings for better usability for the reader as well. I would like to include a ticket booking form for people to interact with it in future.

2.2. Search Engine Optimisation (SEO)

I want to apply better some techniques like heading hierarchy, descriptive alt text for all images, semantic HTML optimization and a proper title charset. These things will increase search engine discoverability.

2.3. Accessibility

The site has many features to help users in accessing the website such as alt text for images, well designed headings, responsive website design and colour contrast. JavaScript has been also used to make things like navigation dropdown menus and ticket form very interactive on the Tickets page. Also, future improvements should be keyboard navigation and labels for dynamics.

3. Part C

Area	Viagogo	Ticketmaster
Weblink of the Website	https://www.viagogo.co.uk/	https://www.ticketmaster.co.uk/
Usability	Simple interface with many options	Clear interface, well-organised
Accessibility	It has not clarity	Simpler layout
SEO	Large amount of content	Clear structure
Mobile Friendliness	Responsive	Better optimised
Conclusion	Good but too complex	Clear, easy to use
