

Perplexity AI

Perplexity AI is different from a traditional search engine because instead of simply showing a list of websites, it searches for information and provides a summarized answer along with sources and citations.

Perplexity has a free version that can be used for basic research. It also has paid plans with additional features and higher usage limits.

The tool is very simple. We can type a question in normal language, and Perplexity searches the web and gives us a structured response. This makes it useful for students because we don't have to manually open many websites to get an overview of a topic.

Perplexity is particularly useful for research because it provides citations. We can click on the sources and verify the information ourselves. It also has a Research mode that performs deeper searches and creates a more detailed report.

AI-generated answers can sometimes contain errors, so we should always verify important information using the original sources. Also, some advanced features are limited on the free plan.

Perplexity has a free standard plan, a £20 monthly pro plan, a £10 monthly education pro plan for verified students and a £200 monthly max plan.

To conclude, I think Perplexity AI is an effective AI research tool because it combines web search, AI summarization and source citations. It can save time and make research easier, while still allowing users to check the original information.
