

How do we use technology to collaborate at UWTSD?

Sabrina Akhtar (2124109)
Bushra Tariq (2120211)
Erika-Stefania Cretu (2119471)

Are staff and students confident in using technology to collaborate?

- Technology is a very important part in everyday life for staff and students at UWTSD.
Technology is important as without technology, we wouldn't be able to find out certain things.
Technology helps us to discover new things online and allows us to research and discover new IT skills.
- Technology shows more than the human eye.
Staff and students are confident using technology as it allows us to have a better understanding when we do our research.
- Without technology we wouldn't be able to find out what is going on around the world. Technology keeps us informed and up to date with worldly matters.
- Technology is a great way for students to gain new opportunities and experience in their daily life.

Existing Research

<https://work.chron.com/can-technology-enhance-teamwork-groups-workplace-1878.html>

This link shows through research that it is better to interact with students through media platforms, such as Microsoft Teams, and do online presentations.

It also shows that using technology to collaborate, it can help increase students (IT skills) for the future.

Ethical considerations

- Ethical considerations are morals that a person should go by when collecting data.
An example of ethical considerations are to keep things confidential, voluntarily consent etc. (Bhasin,2020)

Hypothesis

- Our hypothesis is that staff and students are confident in using technology to collaborate as it can help them develop new technology skills. It is beneficial for both staff and students as they can work in their own time. Also, it allows them to work in their own comfort from anywhere around the world.
