

1. **Stacey Coleman (Swansea-based):** Primarily interested in the application of social and health psychological theory to the occupational realm using quantitative and/or qualitative methodologies. Recent research interests focus on the exploration of menstrual health implications in the workplace, and stigma related to visible body adaptations on the perception of job role suitability.
2. **Zoë Cooke (Swansea-based):** Primary research area is Health Psychology, specifically the psychosocial impact of illness and disease, and quality of evaluative methodology for measuring impact of psychosocial interventions. My experience has been with cancer, dementia and disability but also interested in public health and policy initiatives. I have experience with qualitative and quantitative methods in psychology and applied computing and favour mixed methods approaches to research.
3. **Karen Eaton-Thomas (Carmarthen-based):** Main areas of research focus upon attitudes, stigma, mental health and well-being in a number of areas including (but not limited to) media and forensic psychology.
4. **Dr Charlotte Greenway (Carmarthen-based):** Primary research area is in Educational Psychology using quantitative and qualitative methods. Recent research centres around children's attention deficit hyperactivity disorder (ADHD), additional learning needs and therapeutic play.
5. **Dr Paul Hutchings (Swansea-based):** Primary research area is in experimental social psychology, using experimental and quasi-experimental measures to examine issues of prejudice and discrimination, particularly relating to race, gender, and politics.
6. **Dr Stuart Jones (Carmarthen-based):** Primary research areas are in the field of Sport, Health and Exercise Psychology, Individual differences and Cognition using quantitative and qualitative methods.
7. **Dr Judith Marshall (Swansea and Carmarthen based):** Social psychology researcher using qualitative and mixed methods. Focus: People's understandings of themselves and their roles and positions within society. Research focuses on how identities are constructed, negotiated, defended, and modified due to chosen or imposed life changes.
8. **Dr Ceri Phelps (Swansea-based):** HCPC registered health psychologist with research exploring the psychological impact of genetic testing and understanding how people respond to stressful life events, particularly threats to health and wellbeing.
9. **Dr Lymarie Rodriguez (Swansea and Carmarthen based):** My research interests focus on the psychosocial dimensions of mental health and wellbeing, and my projects involve qualitative methodologies and mixed methods approaches. Current projects: Emerging adults' substance use; ecotherapy and nature-based wellbeing; spirituality and mental health.
10. **Dr Katie Sullivan (Swansea-based):** Experimental social psychology researcher (quantitative methods). My primary research area focuses on issues of prejudice and discrimination, particularly focusing on gender bias and racial/cultural prejudice. In addition, my previous research has also focused on political issues, such as attitudes towards immigration and how political affiliation influences attitudes and behaviours.
11. **Dr Kate Williams (Swansea-based):** Cognitive experimental researcher (quantitative methods). Main research area focuses on memory, particularly factors that contribute to forgetting in long-term memory. Also interested in cognitive factors of eyewitness memory, educational learning, and effects on driving.
