

Sustainable Development: Workshop

SUSTAINABLE CITIES

Consider global sustainability. Over the next few weeks we are going to look at cities, transport, agriculture, construction and water availability. Key to the challenge will be global population levels. In advance of these lectures, spend this session researching the following key areas:

- **Mega cities**
- **Transport networks**
- **Construction and design**

Are our cities currently sustainable? To answer this you will need to research statistics on size, structure, pollution levels, health challenges, congestion, waste production etc etc. Stats and references/case studies are important.

Thanks

Rhian
