

Basic Digital Safety

Online safety is all about being conscious and attentive of all the possible ways we can be intimidated and threatened throughout the time we spend on the internet.

Never share your password to anyone.

It is important to prioritize the always the security of your password, Put a strong password, a unique one that is not easily guessed or common, and avoid using password that contain personal information

Be careful of what you download.

Refrain from downloading any applications or any software that appears suspicious or you dont know, most of the times introduce a malware to the system and steals all data on the system of your computer

Practice safe browsing.

A single inadvertent click can cause an expose of all your sensitive information and all the personal detail stored in the computer, always remember be careful and take consideration before clicking on any link unknow

Be careful of what you post.

Please refrain from sharing all type of sensitive information such as children's school details, residential addresses, phone numbers online to ensure safety, as all internet content remains accessible even if deleted.

Stay safe online!
