Basic Digital Safety

01

Regularly update your software

Keeping your apps and devices up to date ensures that you have the latest security fixes that are available. Install updates as soon as they are available.

Use unique passwords

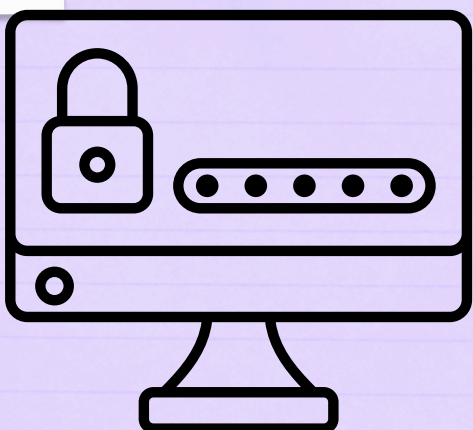

Choose a mix of letters, numbers and symbols when creating your passwords. Try using an unique password for each site you register.

02

* * * *

03

Turn on two-step verification

Use two-step verification on your accounts for extra layer of security. Even in a situation when someone finds out your password, they can't access your accounts without verification that it's actually you trying to log in.

04

Back up your data

Guard your most valuable data such as photos or important documents in external storage devices or cloud storages. In case of hardware failure your most valuable data will always be accesible.

Secure your personal information

Be careful of sharing information such as: Full name, address, work, phone number, usernames and passwords. Never share any information unless you are sure of safety of your personal information.

05

06

Be aware of malware

Be careful of malware being spread around the internet.

Don't click links or open any files recieved from people you don't know. Avoid downloading software files from any unknown sources.

Make sure your internet connection is safe

When you go online in a public place using public wi-fi, be aware that you have no control of it's security and privacy settings. When using one, make sure your device is safe and hwne in doubt use a VPN.
