

# Digital Competences in Academic Life

- Student Name: Iria Balde
- Module: BMSW4008
- Student ID: 2423788
- Date: 16/03/26

# Introduction

Hello everyone. Today I will talk about digital competences and why they are important in academic life .In today's world, technology plays a very important role in how we study, communicate, and organize our work.

Digital competence are very important today.

Technology is used in education and work.

Digital tools help people communicate and organize information.

- Technology is part of everyday life.

Digital skills are important for students.  
They help us work more efficiently.

Nowadays, digital technology is part of our daily routine. Students use digital tools for research, communication, and completing assignments. Because of this, developing digital competences has become essential for academic success.

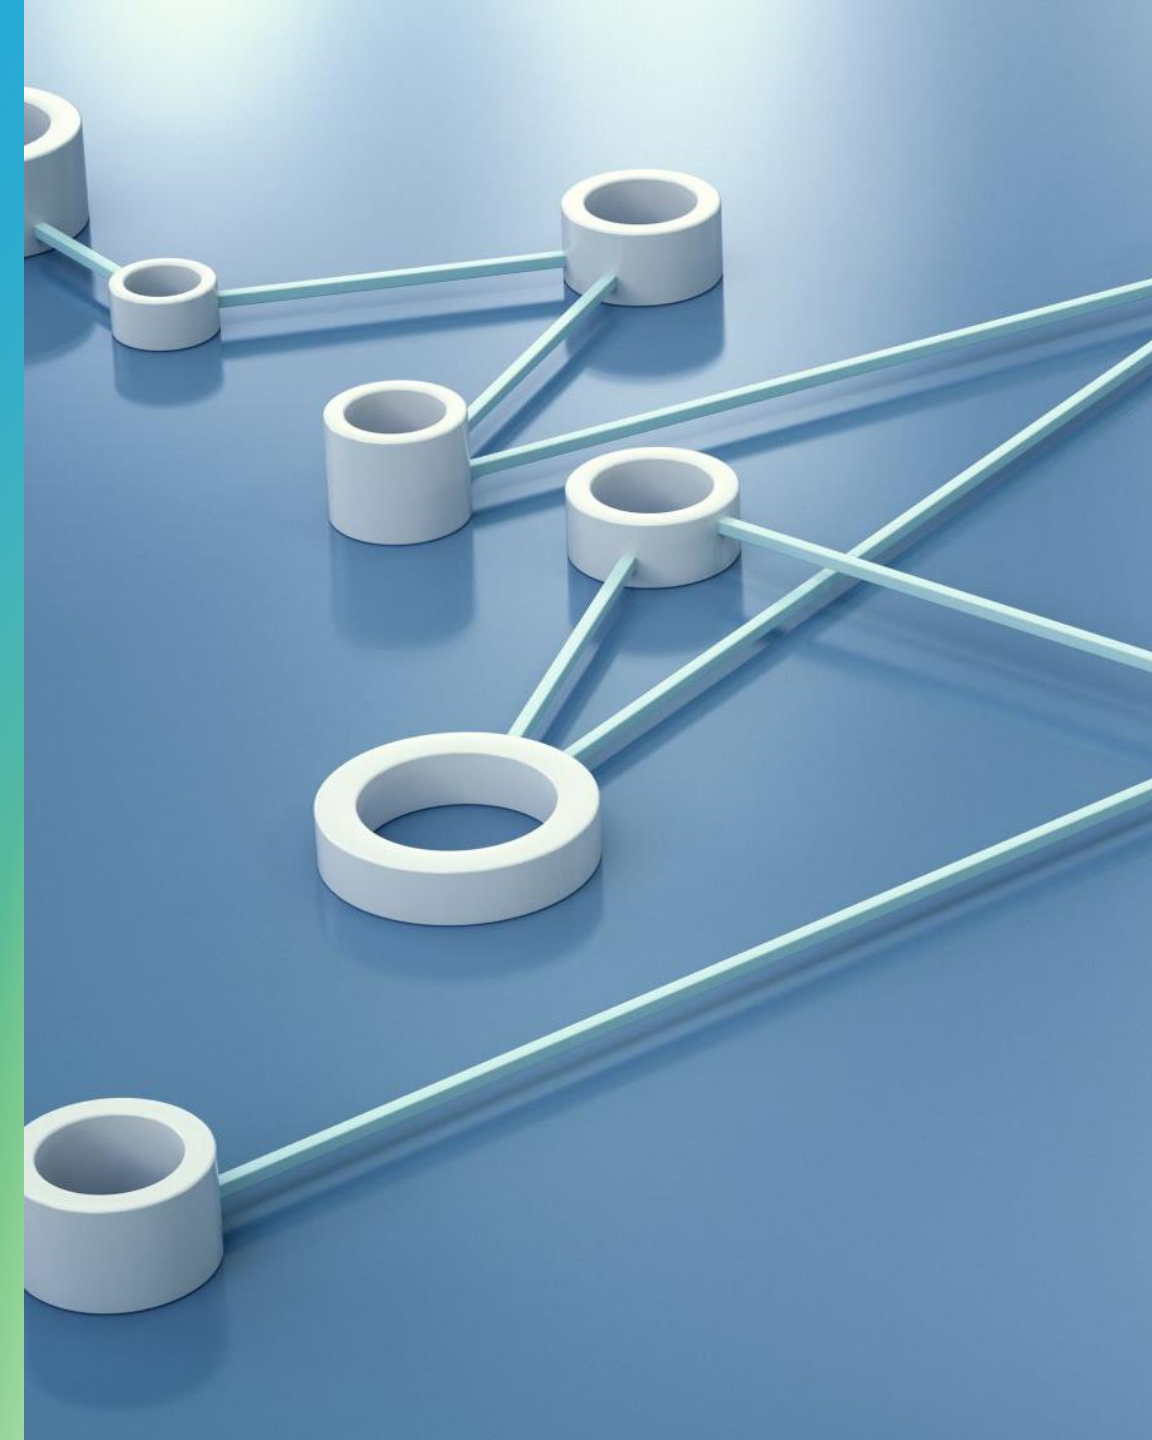

# Communication

Digital communication tools make it easier for students and teachers to stay connected. For example, Microsoft Teams allows people to have online meetings, share files, and collaborate on group projects.

## Digital Communication

- Helps students communicate easily.
- Supports online meetings and teamwork.
- Makes collaboration faster.

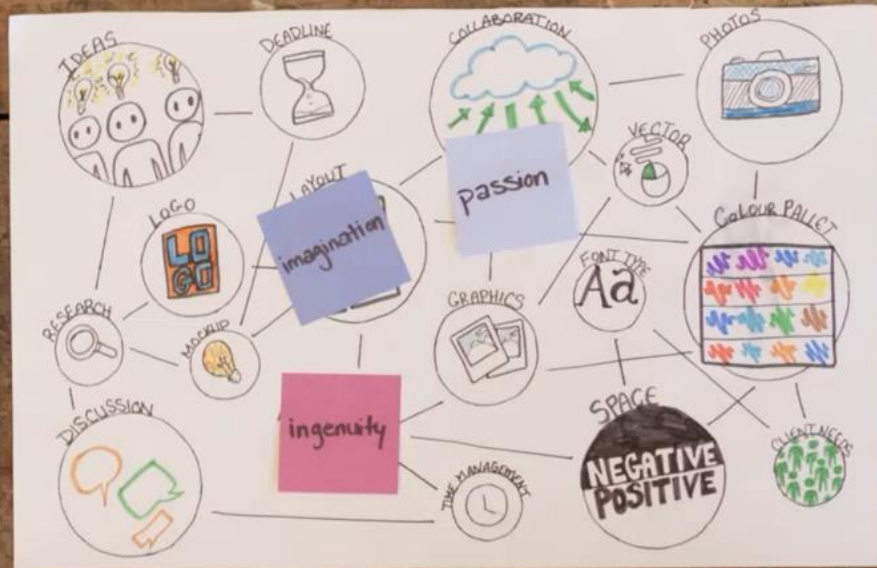

## Organising Information

- Helps manage data and tasks.
- Useful for analysing information.
- Improves productivity.

Another important digital skill is organising information. Tools like Microsoft Excel help users create tables, manage data, and analyse information. This is very useful for academic work and professional tasks.

# Presenting Ideas

- Helps explain ideas clearly
- Uses visuals like images and charts.
- Makes presentations more engaging.
- PowerPoint is commonly used to present ideas in a clear and visual way. Using slides, images, and charts can make information easier to understand and more interesting for the audience.

# Conclusion

Digital competences are essential today.

They support communication and organisation.

They are important for academic and professional life.

In conclusion, digital competences are very important in today's academic and professional environments. Learning how to use digital tools effectively can improve communication, organisation, and productivity.
