1.

c) ~~bio hydrogen~~ fuel soon as bio and bio ethanol
to be successful there would need to be a
big infrastructure put in place to accommodate
the new fuel. BME could use existing tech
the LPG currently using but would have to be
scaled up in order to accommodate and make the
fuel be economically viable as it has a low
calorific value meaning more fuel would need to
be used ~~for the~~ to give the same mileage as
petrol or diesel.
