3. In psychology, cognitive dissonance is the mental stress or discomfort experienced by an individual who holds two or more contradictory beliefs, ideas, or values at the same time; performs an action that is contradictory to their beliefs, ideas, or values; or is confronted by new information that conflicts with existing beliefs, ideas or values (Wikipedia, 2015).

4. The popular image of memory is as a kind of tiny filing cabinet full of individual memory folders in which information is stored away, or perhaps as a neural super-computer of huge capacity and speed. However, in the light of modern biological and psychological knowledge, these metaphors may not be entirely useful and, today, experts believe that memory is in fact far more complex and subtle than that (human-memory.net)

6. Attachment behaviour in adults towards the child includes responding sensitively and appropriately to the child's needs. Such behaviour appears universal across cultures. Attachment theory provides an explanation of how the parent-child relationship emerges and influences subsequent development (SimplyPsychology.com 2007).

7. The intervention significantly reduced intrusive thoughts during the waiting period in those reporting moderate baseline levels of intrusion. Following risk provision, those in the intervention group reporting low and moderate intrusive worries at baseline reported less intrusive thoughts than those in the control group (Phelps, Bennett, Hood, Brain, & Murray, 2012).
