

OrCAD

A Great Place to Do Great Work

1) OrCAD PCB Designer

OrCAD Design is a powerful, tightly integrated PCB design technologies. It, has the schematic capture, also consisted of many other deferent tools and PCB editing. Like librarian tools, and constraint manager. OrCAD PCB Design software include signal integrity, also Professionals and optional mixed signal circuit simulation. OrCAD PCB Designer is a solution that this software delivers advanced capabilities and highly integrated flows.

2) Why OrCAD PLATFORM

OrCAD Platform is love by professional electronics engineers and graphic designers. Electronics workbench is an electronics circuits, simulation software that can preform various circuits work demonstrations, also simulate various electronics circuits, and scale the displayed waveform. Electronics workbench is a classic compact, easy to use analogy and digital circuit simulation software.

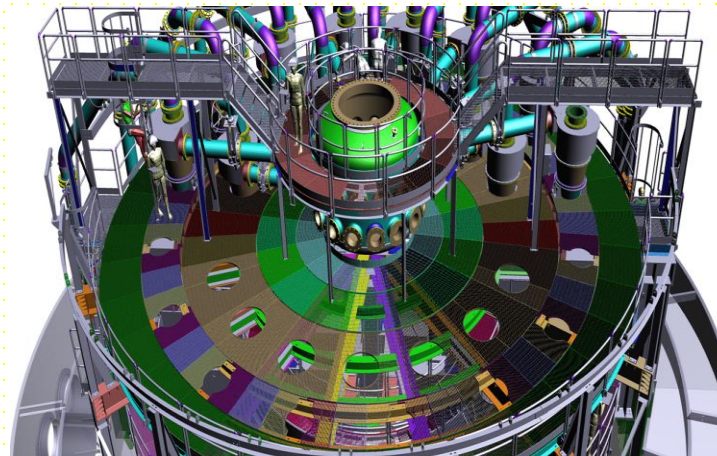

3) 30CAD format the HOOPS web platform

30CAD format the HOOPS web Platform, give you the chance to accelerates web application development, providing advanced 3D web visualization,. Hoops gives you fast and accurate CAD data access, also 3D data publishing software. On HOOPs web platform you can unleash the power of the development toolkits SDKS. With this platform you do great things , like create application that imports 3D graphics design. This plat form allow you to build applications for AEC, Maas, CAM Metrology, CAE, EDA and many more things to do.

ELECTRONICS

4)Flexible & Easy To Deploy

With Hoops communication there is no barriers between you and the application you want to build, it provides a powerful API that strikes a perfect balance between engineering focused functionality a general purpose graphics system. Also a Straight forward server and CAD conversion components, a simplify integration of graphics into any web application.

5) SINGLE ENVIRONMENT FOR 2D & 3D

This is an SDK platform that provides fastest applications for industry's and most accurate CAD data translation, satisfying even the most exacting customer expectations. Using a single API for cloud, server or desktop solutions, HOOPS Exchange CAD Translation SDK will give your software access to 30+ popular CAD formats including CATIA, Solid works, Inventor, Revit, NX, Solid Edge along with associated data such as BREP, PMI, model tree, views, and more. For cloud solutions that need to visualize as well as convert CAD data, the multi-CAD viewing, interaction and sharing HOOPS Web platforms provides a plug and play systems add on

TECH SOT3D

6) HOOPS Communicator

This a powerful SDK for advanced web based engineering applications, which has a high-performance graphics kernel and provides a flexible and feature-rich API.

7) A Single Environment For 2D & 3D

To day Tech 3D software pleased to say that other partners are using there amazing tools. Large industry leaders, Adobe, Autodesk Trimble, Bentley, ANSYS, Grab CAD and Lagos using this software platform. 3D systems CR 8000 Design Force, is a comprehensive tool for PCB design, it turned to HOOPS Exchange in order to effectively combine traditional 2D design with native 3D design. HOOPS Exchange is the fastest and most accurate cad data translation toolkit. This product is well love all around for its powerful intuitive operation interface.it is widely used around the world. OrCAD is a professional PCD design software platform tool for all graphic designers.

8) HOOPS Exchange
