

How to insert hyperlink into a power point presentation

PowerPoint offers several ways to add hyperlinks to your slides, depending on your goals. Do you want to direct your audience to a website, create a non-linear presentation, or encourage them to send you an email?

Hyperlinks in PowerPoint are simple to add and can turn your presentations into interactive experiences.

Here's a quick summary of how to add hyperlinks in PowerPoint for different uses:

- 1. To redirect to a website:** Select text or an object, right-click and choose *Hyperlink*. Enter the URL in the *Address* field and click *OK*.
- 2. To create a non-linear presentation:** Select text or an object, right-click and choose *Hyperlink*. Select *Place in This Document*, then choose the slide you want to link to and click *OK*.
- 3. To encourage emails:** Select text or an object, right-click and choose *Hyperlink*. Choose E-mail Address, enter your email and click *OK*.

These simple steps will help you add hyperlinks for websites, interactive navigation, or email contact in your PowerPoint presentations.

Test the hyperlink

After inserting the hyperlink, you can test it in Normal view by right-clicking the link and selecting "Open Hyperlink."
