

Research

In order to be able to make the most of the time available on the Island it is really important to research what can be expected. The terrain and the flora and fauna are all critical elements for the success of the production. Being able to identify the best sites to set up and watch the wildlife is crucial. In the reference list below you will find the sources used to identify the types of wildlife found on Skomer and information about the geography of the island. If this research was not completed then many of the important points being made about Skomer not just being about puffins could be missed. The links also indicate when the best times are to see each of the species in relation to season.

Skomer island reference list.
