

Research Participation Log 2017/2018

Level 4 Research Methods

Study One Study Code: SWAN_Credit_GH	
1) Was the BPS Code of Human Research Ethics followed? (E.g. was informed consent gained? Were you aware of your right to withdraw? Was confidentiality upheld?)	
Yes ☒	No ☐
If not, which guidelines were not followed? N/A	
Describe how the ethical guideline were followed? Informed consent was given at the beginning of the study by signing the consent form to insure I gave my permission. The study warned me there would be no stress within the study, but if it did occur, there would be support for me. It was stated that there would be confidentiality within my results, which would remain anonymous and that the results would be destroyed after the completion of the study. I was told I could withdraw at any given time without fear of being penalised. After the study I was given a debrief sheet that showed the aims of the study and the right to withdraw from the study

Describe how the ethical guideline were followed?

Informed consent was given at the beginning of the study by signing the consent form to insure I gave my permission. The study warned me there would be no stress within the study, but if it did occur, there would be support for me. It was stated that there would be confidentiality within my results, which would remain anonymous and that the results would be destroyed after the completion of the study. I was told I could withdraw at any given time without fear of being penalised. After the study I was given a debrief sheet that showed the aims of the study and the right to withdraw from the study

[illegible]

How were you fully debriefed after completing the study?
Were you given opportunity to discuss with the researcher after completion?

After the study, I was given a debrief sheet which clearly stated the aims of the study, and contact details of the researcher so I could ask questions after the study.

Are there any areas of improvement for this research study? (think about the materials used in the study and how the researcher carried out the study)

Explain why the chosen tasks were going to help your research to avoid confusion.

Date: 15/02/18

Briefly describe/outline the study you participated in (What were you asked to do? Did you understand the purpose before/during the study?)

Before the study began, the researcher explained that there were two questionnaires to fill in about schizophrenia and social media usage. In order to complete this study a Facebook or twitter account was required, on reflection, this was necessary to give an honest opinion.

Briefly describe your experience of taking part in this research study (positive aspects/issues that may have impacted your participation)

My experience during this study was extremely positive. I found the study to be fascinating and helped to increase my knowledge of schizophrenia and social media usage. It also made me realise how little knowledge I had of the subject previously, and want to develop this even further.

How were you fully debriefed after completing the study?
Were you given opportunity to discuss with the researcher after completion?

At the end of the study, the researcher handed me a debrief letter of that I had participated in, and if I had any queries or questions, the contact details of the researcher were put on the sheet.

Are there any areas of improvement for this research study? (think about the materials used in the study and how the researcher carried out the study)

Briefly describe/outline the study you participated in (What were you asked to do? Did you understand the purpose before/during the study?)

This study was about a three phased, short-term memory recall test. I was required in this study to take part in a three phased memory recall test. This involved matching pairs of words together. I was then asked to listen to a mindfulness audio which focused on breathing. Which took approximately 30 minutes.

Briefly describe your experience of taking part in this research study (positive aspects/issues that may have impacted your participation)

I found some aspects of this study fun such as the word pairing, but I found that the mindfulness was boring and pointless, as it did not relate to what the researcher was exploring

Note:

This image shows a single sheet of white paper with horizontal blue or grey ruling lines. The lines are evenly spaced and run across the width of the page. There is no text or other markings on the paper.

How were you fully debriefed after completing the study?
Were you given opportunity to discuss with the researcher after completion?

After the study, I was given a debrief sheet which clearly stated the aims of the study, and contact details of the researcher so I could ask questions after the study.

Are there any areas of improvement for this research study? (think about the materials used in the study and how the researcher carried out the study)

Perhaps not so many pieces of paper given out at once to avoid confusion.

Briefly describe/outline the study you participated in (What were you asked to do? Did you understand the purpose before/during the study?)

The study involved three questionnaires to be completed, reading a horoscope and personality profile. After there were completed, I was asked what my star sign was and given a horoscope and personality profile with regards to this. Once I had read this, I rated the accuracy on a personality profile.

Briefly describe your experience of taking part in this research study (positive aspects/issues that may have impacted your participation)

I thoroughly enjoyed participating within this study, as I am highly interested in horoscopes etc.
