Interior Layout

Inspired by many holidays in campervans and a caravan this layout was chosen to fit in everything you need for any road trip while keeping a spacious interior.

The interior is based around a U shaped dining area looking out to the dual doors that open conventionally or drop down to create a balcony. The front seats rotate 180° to face into the living space. The kitchen wraps around the back with a full size fridge opposite. The kitchen units and fridge hide the rear wheel arches and the front wheel arches are below the raised cab floor.

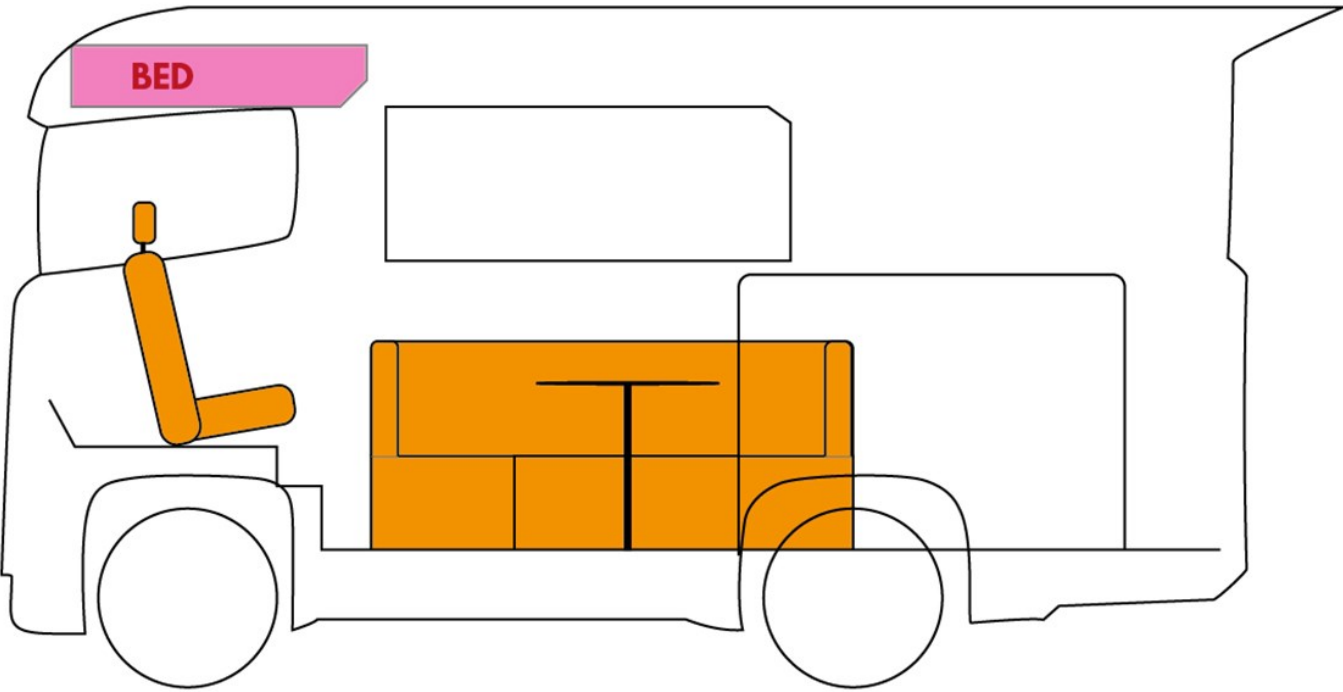

The main bed is located above the front seats, it raises to the roof when driving or lowers when in use. Above there is a pop up roof section for warmer evenings. The dining table lowers to the seats to create a second bed.

The bathroom is located at the back with separate toilet and shower.

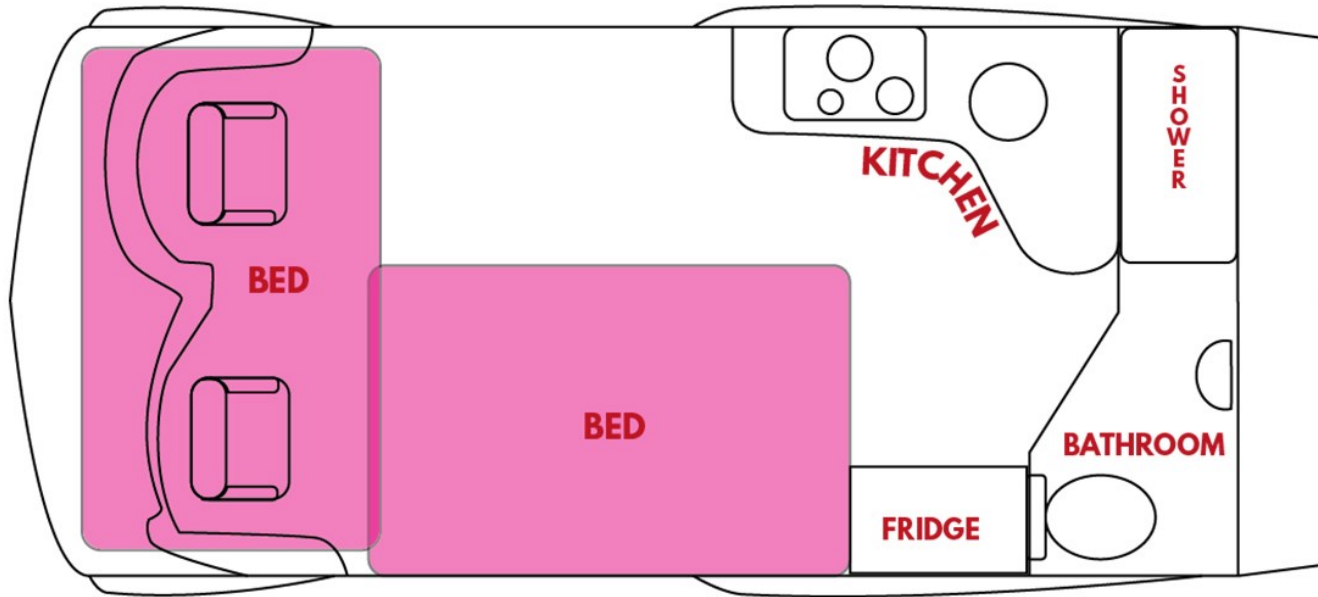

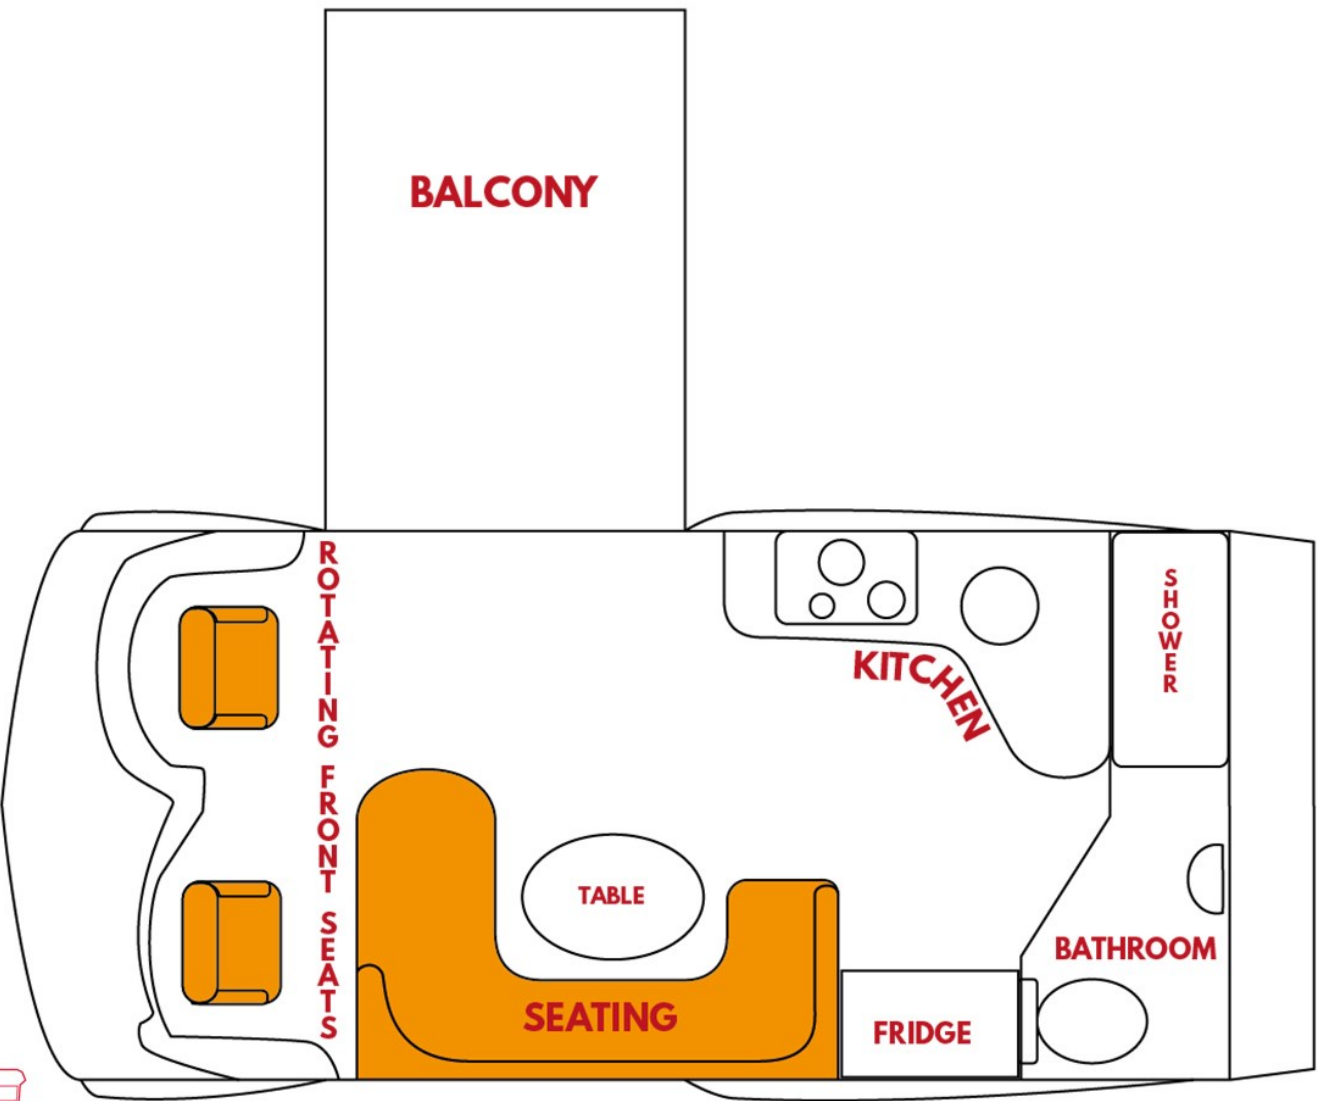

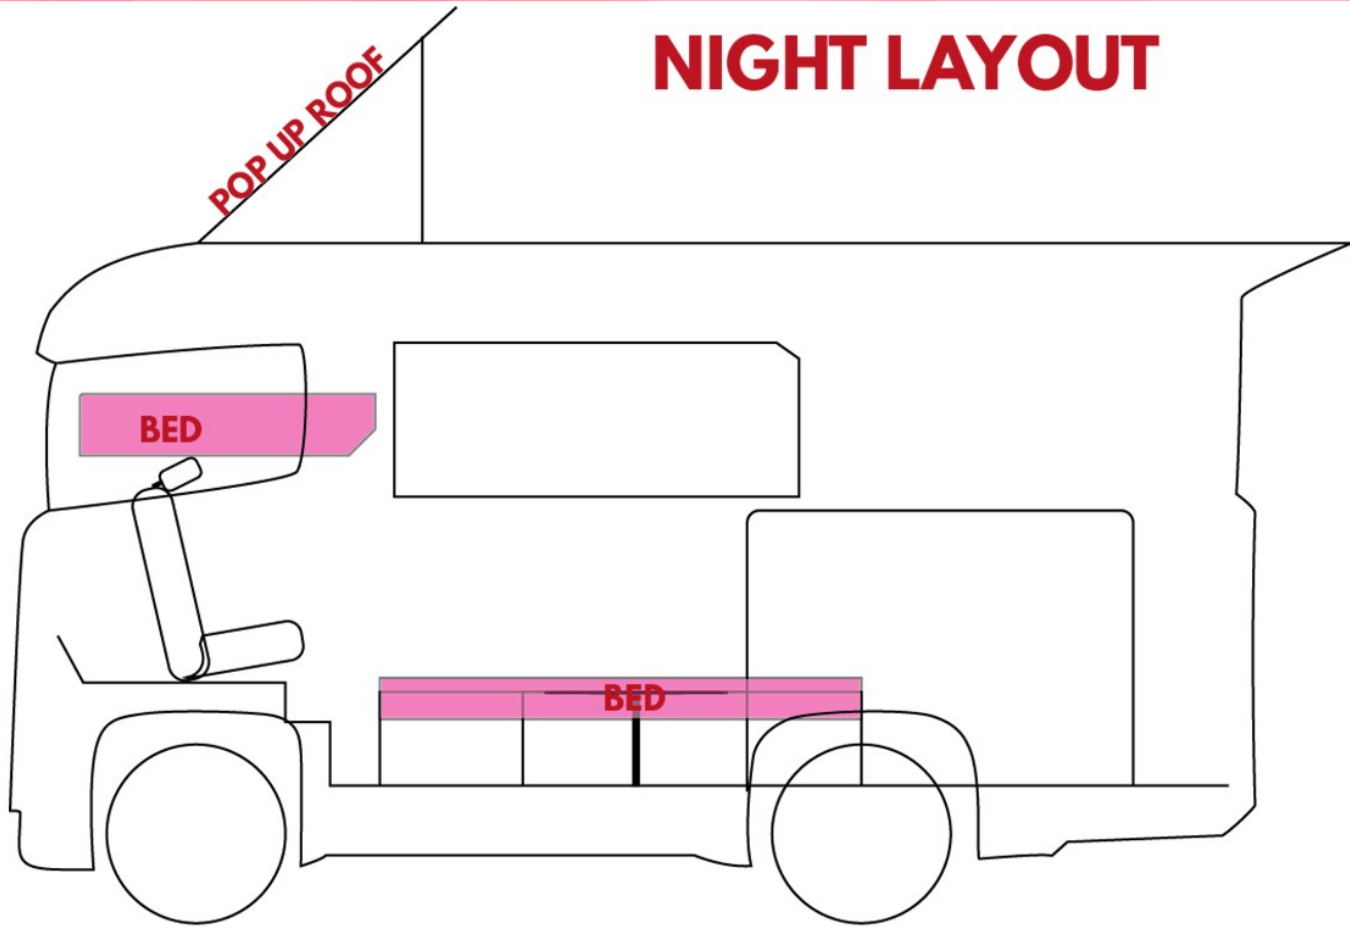

There is more free space than most campervans making it easier to move around and a more flexible space with plenty of room for extra gear.
