

~~I do not have major subject~~ however I would like to choose Supply chain management in Logistics from Second semester. There are two reasons why I would like to do. First of all, in my future, I hope to get the job about dealing with many types of products with other countries. ~~To get these jobs, I have to obtain a lot of knowledges about Logistics.~~ Secondly, the reason is to improve my interests. If I could enrich my experience of supply chain management, I could enjoy news which is happened all over the world.

(13)

Name: Jasmine. (Muchun Guo)

My major is BA Product Design in Art and Design College. In my opinion, this major is very important for our daily life. For example, a chair designer should think about the material height, softness, color and the shape of it. What we design is for human, ^{like} how to they feel? who is special for? where they put it?

This major make me concern more about the details in my life.
