Introduction

- Digital learning skills is defined as acquiring skills by learning using technology in more better ways, through different methodology by virtual learning for example mobile and online learning and there is advantages 1.1and disadvantages 1.2 conclusion 1.3 and summary 1.4 as follows below
- 1.1Advantages
- The new technology and method enhancing studies for students to learn in various ways replacing the old conventional ways of studying face to face with the lectures by using
- Different tools and software examples
- Tablet iPads or computers and applications as notebooks online learning and other software that facilitate areas of education and interactive and recording content e.t.c

Disadvantages

- 1.2 Disadvantages
- The old traditional way of learning in classes has face to face learning methods. But now digital learning reduces interaction with
- face to face with the the lecturer's and harped immediately feedback, social isolation and causes layback in students by feeling more relax because lack of the monitoring and reduces concentration level
-

Conclusion

- Digital learning technology is the way forward because it merits more than its demerits by improving career and employability, communication and tracking students' progress and can study or submit assessment at flexible times and choose location and making learning easy by using different tools like copying and using Microsoft software. However, it reduces social interaction with other students and encourages laziness because students feel more relaxed and lazy because of lack of monitoring and your personal information can be obtained by everyone easily, for example, your relationship, personal details and movements anywhere in the world.
