

10 THINGS YOU CAN DO WITH SONY VISION EXCHANGE

SONY

VE

Sony Vision Exchange is a new classroom tool available in all new flexible learning spaces in SA1.

It's an addition to, not a replacement of, the existing standard audio/visual equipment (Lectern PC, projector and screen).

- Quick and easy connection through the VE app for staff and students
- Share student content to the main display, annotate and capture
- Intuitive interface - drag and drop and one-click tools.
- No limits - share whatever is on the device screen - including specialist software
- Maintain control - you decide what it is displayed at all times.

01 Discuss and Feedback

Set students a question, problem or scenario to discuss in groups and record their answers digitally using whatever software is appropriate. Then ask them to share via Sony Vision Exchange—discuss the answers as a cohort, emphasise important points using annotation, and snapshot the image to share later for reinforcement and revision.

02 Encourage Sharing

Students can quickly and easily suggest useful resources, e.g. a website, by sharing and demonstrating the resource through Sony Vision Exchange rather than having to verbally explain how to access the resource to the class.

03 Capture Non-Digital Work

Physical and non-digital activities can be shared through Sony Vision Exchange. Photograph work on paper or a whiteboard, or video a process, performance or interview, and share, annotate and capture the image/video via Sony Vision Exchange.

04 Collaborative Research

Set groups of students different tasks—for example collecting and presenting different data sets. Compare and contrast in class by sharing through Sony Vision Exchange, then annotate as required and snapshot each group's contribution so that all students can be provided with a full set of data for reflection and revision.

05 Solve Problems Together

By sharing the screens of students who are at an impasse or who encounter a problem in classroom tasks you can facilitate collaborative problem solving and promote rich discussion for the whole cohort. NB—Sensitivity and a positive, supportive classroom culture is required here to avoid embarrassment.

06 Use It As Your Default Environment

When presenting, run your presentation through the Sony Vision Exchange interface either via the lectern PC, or via a laptop - seamlessly switch between presentation content and audience content, annotate slides on the fly as questions and new ideas emerge and capture those newly annotated slides for later use.

07 Improve Participation

Encourage quieter students to contribute through the ability to anonymise their device name in the app settings.

08 Share Good Practice

Good practice demonstrated by students in classroom tasks can be highlighted and shared for all through Sony Vision Exchange.

09 Use Student-Generated Content

On field trips or site visits students can capture photographs and video footage on their mobile devices, which can then be played back in class for further discussion, analysis and reflection.

10 Enrich Feedback

In-class research and enquiry is enriched by students being able to visually share their findings and sources, instead of verbally reporting back to the cohort.
