

RULES

This game is for 2 or 3 players.

You need a die, a token for each player, paper and pencils and Cuisenaire rods [or coins].

Take turns to throw a die and move around the board. When you land on a number, write down all the factors of that number **except** one and the number. For example, all the factors of 10 are 1, 2, 5 and 10, but for this game only 2 and 5 will count.

Read out your list, using the word 'factor' each time, e.g. if you land on 10, say: '2 and 5 are **factors** of 10.' If your opponents agree with your list, take rods [or coins] to match the value of each factor you have written down correctly.

A tip to help you play: notice that all the numbers on this board come from the four multiplication tables named in the middle.

The game ends when all players have been round the board twice. Sort your rods into lengths of 10 [or coins into stacks of 10] to find who has won the most.
