

Data Mining – Dataset Presentation			
Student	Quan Xiaoqi		
Dataset	Healthcare analytics		
Marking			
Presentation/Slides (Clarity, readability, flow, accuracy, completeness, performance) Clear slides, but you don't need the animation between the slides. Nice use of graphics.			(10 marks) 7
Dataset Description (Where did the data come from? What does the data describe? Is the sample large enough? What data formats and types are involved?) Kaggle competition dataset. Gives reason for the final attribute missing in the test dataset – good.			(50 marks) 32
Dataset Suitability (What features of the dataset lend themselves to data mining? Has it been mined previously? Why does the student feel that they have the contextual background to work with this data?) Good size of dataset. Good justification of selection of the dataset, given that Covid has raised healthcare management as a field where data mining can be used. Having no healthcare background might mean that you don't recognise how important some relationships in the data actually are.			(20 marks) 13
Objectives (What does the student plan to investigate/expect to find? Are these SMART?) Good questions, but a third one would be useful.			(20 marks) 11
