DIGITAL SAFETY

01

What is Digital Safety

Digital safety has as purpose to protect our personal information and to recognise the potential danger such as online harassment, cyber bullying and inappropriate content.

How to prevent

- Think before you post something on internet
- Block any suspicious email's (may be a scam)
- Report if someone try to stole your identity or any action that may be against the law or affecting you such as cyber bullying

Case Study

After many research I found an interesting case study. Josh Howard suggest that :)
„Female teenagers are almost three times as likely to experience cyberbullying than male teenagers (NCES)

22.4% of female students aged 12-18 say they've been the victim of cyberbullying, either online or via text. 7.6% of male students in the same age range reported similar instances of cyberbullying.
