

Basic Digital Safety

WHAT IS DIGITAL SAFETY ?

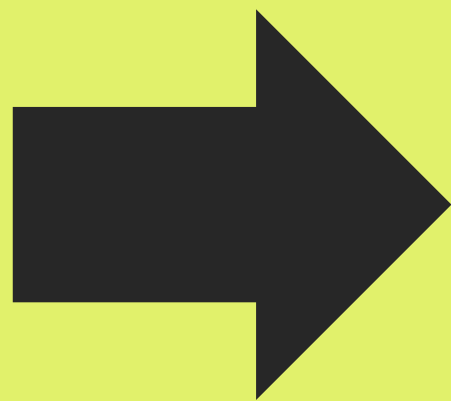

Digital safety helps you on preventing and minimising harm in the online environment . Safety is similar to a range of activities including online privacy.

PRACTICE SAFE BROWSING

Is not necessary to visit websites that are not safe. By waiting the urge, you do not even give the hackers a chance. Be alert of what you download. The strategy of cybercriminals is to trick you into downloading malware programs or apps to try to steal you information.

KEY DIGITAL SKILLS

By protecting your devices , don't try to share your personal data , backup your data regularly on your devices , you need to become critical when accessing websites and new information . You could supply only information whenever about for credit card or bank account to sites that provide secure trusted pages

Using virus protection is a method that will help you to protect your device. Another method that will be put Privacy setting on accounts like in social media an example instagram, facebook or Tik Tok. Also Look up for domain names (org. ,.com, gov.) and check websites.

VIRUS PROTECTION

Virus protection is Program that can delete files or slow down your computer. Is essential to use this program to keep your antivirus program up to date. Be confident to stay current with your system updates to applications you might use .

ONLINE SAFETY

At the internet we have access to information. Now a days we can work, check bank balances, etc. As the new generation for example, children and young people need to be aware of social media get exposed from personal data. Online safety is really useful and helpful for us in daylife when we use any application from our devices to get protect from hackers or being getting information.
