A digital footprint – sometimes called a digital shadow or an electronic footprint – refers to the trail of data you leave when using the internet. It includes websites you visit, emails you send, and information you submit online. A digital footprint can be used to track a person's online activities and devices.

Here are five simple tips on how to stay safe online.

- Use unique passwords. Using the same password for logging in to multiple accounts might seem easy and more convenient. ...
- Log out from services. ...
- Keep your software up to date. ...
- Beware phishing attacks. ...
- Take back-ups.
