

The Digestive System

The job of your digestive system is to break down the food that you eat into useful molecules.

These molecules are used to give you energy, make you grow and make your body function properly.

Let's take a look in more detail...

The digestive system.

The digestive system

The role of the digestive system is to process and break down food, then to absorb nutrients.

This procedure can be looked at four different stages

- Intake of food
- Mechanical and chemical degradation of food
- Absorb nutrients
- Removal of indigestible food
