

DIGITAL SAFETY

PROTECTION

Mobile phones

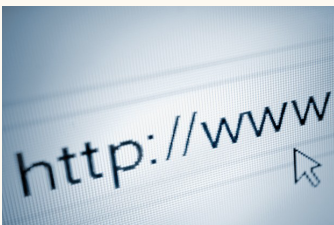

Be careful how and where you leave your phones. Mobile phones are some of the gadgets that contain half or even more of your personal data, they must be secured by a strong password and not be left unprotected. You must make sure that your phones and personal data are safe and no one but you can have access to them.

Email

Email is the most important platform through which we can contact. For this reason, the email must be secured by a password and strong security steps that will ensure your protection. Take care that personal email and business email are not confused and take into account where you access your email to avoid unwanted consequences.

Links

We use links almost every day, even if we don't realise it. Links are the first sources you turn to when you access the Internet when you need certain information. But have you ever thought how dangerous links are? That's why we have to be very careful which links we access and what we allow these links to do with our data. We must be careful about weird links and use only those that are verified and are safe to access, i.e. official links.

Social Media

Social media is the most popular and the most used platform on the internet. Each of us has at least one social media platform. But this is also one of the most dangerous platforms. Be careful what you post, where you post and who has access to your posts. Do not post your personal data or your personal address on these platforms, and be careful who has access to your platforms. Social media must also be secured by strong passwords and no one can know your data, in order to protect you from unwanted consequences.

PUT YOUR PROTECTION IN THE FIRST PLACE AND DON'T BE AFRAID TO ASK FOR HELP IF YOU FALLEN INTO THE HACKERS' TRAP!
