Lecture: Amitave Banik
Task: Informative Poster

DIGITAL SAFETY

“Digital safety “ refers to the set of practices technologies, and measure implemented to protect information and digital systems from threats attacks , and abuses. It includes serval aspects like:

Online privacy: Ensuring that the users online activities remain private and that they have control over their information.

Conduct: Is the way that some people behave online and the online behavior the have, can cause problems to people like harm eg. Also things like Online bullying, also includes things like sharing or receiving nudes.

Stay Safe Online:

By understanding the following tips below you can protect yourself and stay safe online:

- Verify information before sharing.
- Report bullying or online harassment.
- Be cautious of online interactions.

Online Safety: Its about the risk from online gambling, inappropriate advertising, or financial scams. some people may be exposed to these type of risks and scams.

Personal data protection: ensuring that users personal information is secure and used ethically.

Education and awareness: Informing users about best security practices, such as using strong passwords , recognizing phishing attempts , and managing privacy settings.

System security: protecting computers, networks and applications from hackers , attacks, viruses and other malwares.

Basic Digital Safety: As the technology continues the problems and bad things that children and young people face online. Digital safety is all about looking out for your well-being in the online world.
