

Education in the digital era

By Mohammed
sumon ali

Introduction

In the report the main focus was on the challenges and opportunities students around the world face because of education in the digital era

In summary, students today face challenges, and have opportunities I have listed some below

Challenges

- distraction and digital fatigue when using technology for learning.
- Not having access to the internet

Opportunities

- access to many learning resources and personalised learning experiences. To adapt and succeed, students should manage their time well and use AI tools critically and access support services.

Understanding these points will help students make the most of digital learning and succeed in school and beyond.

Research

- The report contains credible sources such as an article from the frontiersin website which was peer reviewed, this gave the article more credibility. I struggled to find a reliable source as I kept coming across unreliable sources which were either out of date or very biased. My research completely changed my perspective of education on the digital era as I didn't know there were that many challenges both students and teachers can face.

Planning and writing

I began by making a basic outline with the key points that I wanted to cover. I started by talking about the things like the challenges which students face and how technology is making an impact on education. I organised my report with clear headings and made sure to use the right referencing style

The hard part was finding a reliable source to get my information from as a lot of the sources I came across had many flaws I overcame this by finding an article that was peer reviewed and up to date

Successes

- I am most proud of being able to find a recent article that was peer reviewed and recent as it made my report more reliable and helped me to explain my challenges and opportunities more clearly

What will I do differently/the same next time

- Next time I will consider explaining my ideas even better as I feel like they can be improved on with more detail
- I will continue to plan anything before writing it down as it helps me to structure my work more effectively and be confident in what I write
- My goal for the next assignment is to improve my grammar as I feel like my English can be improved
