INTRODUCTION

This Module Directory includes all the modules for Level 4 within the Academic Discipline of Architecture, Construction and the Environment in the academic year 2024-2025.

This directory accompanies the Programme of Study Handbook, which will provide you with details of which modules you will be studying for your programme this year in the 'Programme of Study' section. This directory may include modules that are running on other programmes of study within your Academic Discipline/Institute. If you require assistance in identifying the modules for your programme of study, please contact the Programme Manager (whose name and contact details are provided in the accompanying Programme of Study Handbook), or the relevant Institute Office.

The University has made every effort to make the information as full and as accurate as possible, but you should note that minor changes in the organisation of modules between the planning stage and the actual teaching are inevitable. We shall try to keep any such changes to a minimum, and you will receive plenty of advance warning in the event of any alteration. We would also be grateful if you would let us know about any changes that you think might be helpful if introduced into future handbooks.

MODULES

Module Code	ACAA4000
Title	Architecture Studio 1A (Design Skills)
Date	13/07/2024
Level	4
Credits	20
Pre-Requisites	None

ARB*/RIBA criteria addressed in this module - * Due to national level changes, ARB prescription of Part 1 (BSc Architecture) will end on December 31st 2027. However, the programme will continue to map to the ARB criteria.	
Ability to create architectural designs that satisfy both aesthetic and technical requirements	GC1
develop a conceptual and critical approach to architectural design that integrates and satisfies the aesthetic aspects of a building and the technical requirements of its construction and the needs of the user	1.3
Knowledge of the fine arts as an influence on the quality of architectural design.	GC3
the creative application of the fine arts and their relevance and impact on architecture;	3.2
the creative application of such work to studio design projects, in terms of their conceptualisation and representation.	3.3
RIBA THEMES AND VALUES AT PART ONE LEVEL	T&V
Design pedagogies and architectural expression: critically evaluating authentic aesthetic, compositional, and spatial principles to synthesise socially, ecologically, and environmentally sustainable integrated studio projects.	5
GRADUATE ATTRIBUTES AT PART ONE LEVEL	GA
ability to apply a range of communication methods and media to present design proposals clearly and effectively;	2

AIM(S)

- To introduce students to the basic skills of the architect – hand drawing, physical model making and the use of computers for drawing, modelling and image manipulation
- To provide students with a grounding in the conventions of architectural representation and the methods of gathering and recording information on existing building fabric and topography.
- To introduce student to the techniques of representation and interpretation used in the visual arts

LEARNING OUTCOMES

Upon the successful completion of this module, the student should be able to:

- Execute clear and coherent manual and computer representations of three-dimensional space and form using the conventions of orthographic and perspective projection
- Apply representational skills in drawing and physical model making with accuracy and care to explain the technical aspects and formal and material qualities in the design of a small building and its constituent elements

- Accurately measure a simple existing three-dimensional structure and record its main structural and constructional elements

INDICATIVE CONTENT

This module will be taught in the first semester and prepares students to undertake ACAA4001 Architecture Studio 1B (Space and Form) and 1C (Structure and Materials) in the second semester. The assignments may include

- Design exercises aimed at developing the skills of freehand drawing and representing of objects and spaces using the conventions of architectural drawing
- Exercises requiring the construction of physical models
- Exercises requiring measuring and recording existing buildings and spaces
- exercises in the use of computer aided design and image manipulation

LEARNING AND TEACHING STRATEGY

In this module students take the first steps in the development of their core architectural design skills through a process of learning-by-doing. In a varied sequence of projects students apply a range of observational and analytical methods and begin to develop an understanding of the application of technical knowledge to design situations. Students respond (usually individually but sometimes in groups) to a brief or proposition. Ideas are developed using a variety of graphic and computer-based methods supported by discussion with tutors, fellow students and others. Proposals are presented using drawings, sketchbooks, physical models and digital images, often accompanied by explanatory text.

Scheduled learning: Regular studio sessions include: group project briefings, studio lectures, workshops, site visits, group tutorial sessions. Formative feedback is continuous in tutorial session and reviews in which students present their work to fellow students, tutors and sometimes visitors.

Independent learning. Between scheduled studio sessions students work independently both individually and collaboratively to develop their design ideas, carry out project related research and read relevant texts.

Study Time Allocation

The study time for the module is divided as follows:

Activity type	Hours	Percentage
Scheduled learning	48	24%
Structured Learning	12	6%
Independent learning	140	70%
Placement learning		
TOTAL	200	100%

ASSESSMENT

Assessment Component 1

☐ Written exam ☒ Coursework ☐ Practical

Mode of assessment	Volume	Weighting
Portfolio of design project work	2 – 3 components	100%

Assessment Summary

Activity type	Percentage
Written exam	
Coursework	100%
Practical	
TOTAL	100%

Module Code	ACAA4001
Title	Architecture Studio 1B (Space and Form)
Date	13/07/2024
Level	4
Credits	20
Pre-Requisites	None

ARB*/RIBA criteria addressed in this module - * Due to national level changes, ARB prescription of Part 1 (BSc Architecture) will end on December 31st 2027. However, the programme will continue to map to the ARB criteria.	
Ability to create architectural designs that satisfy both aesthetic and technical requirements	GC1
prepare and present building design projects of diverse scale, complexity, and type in a variety of contexts, using a range of media, and in response to a brief;	1.1
develop a conceptual and critical approach to architectural design that integrates and satisfies the aesthetic aspects of a building and the technical requirements of its construction and the needs of the user	1.3
Knowledge of the fine arts as an influence on the quality of architectural design.	GC3
how the theories, practices and technologies of the arts influence architectural design;	3.1
the creative application of the fine arts and their relevance and impact on architecture;	3.2
the creative application of such work to studio design projects, in terms of their conceptualisation and representation.	3.3
Understanding of the relationship between people and buildings, and between buildings and their environment, and the need to relate buildings and the spaces between them to human needs and scale.	GC5
the needs and aspirations of building users;	5.1
the impact of buildings on the environment, and the precepts of sustainable design;	5.2
the way in which buildings fit into their local context.	5.3
Understanding of the methods of investigation and preparation of the brief for a design project.	GC7
the need to critically review precedents relevant to the function, organisation and technological strategy of design proposals;	7.1
Understanding of the structural design, constructional and engineering problems associated with building design.	GC8
the investigation, critical appraisal and selection of alternative structural, constructional and material systems relevant to architectural design;	8.1
strategies for building construction, and ability to integrate knowledge of structural principles and construction techniques;	8.2
the physical properties and characteristics of building materials, components and systems, and the environmental impact of specification choices.	8.3
Adequate knowledge of physical problems and technologies and the function of buildings so as to provide them with internal conditions of comfort and protection against the climate.	GC9
principles associated with designing optimum visual, thermal and acoustic environments;	9.1
systems for environmental comfort realised within relevant precepts of sustainable design;	9.2
strategies for building services, and ability to integrate these in a design project.	9.3
RIBA THEMES AND VALUES AT PART ONE LEVEL	T&V

Design pedagogies and architectural expression: critically evaluating authentic aesthetic, compositional, and spatial principles to synthesise socially, ecologically, and environmentally sustainable integrated studio projects	5
GRADUATE ATTRIBUTES AT PART ONE LEVEL	GA
ability to identify individual learning needs and understand the personal responsibility required for further professional education.	6

AIM(S)

- To Introduce students to the core skill of the architect – the design of objects, buildings and spaces to meet the needs and aspirations of people – with an emphasis on form, space, order and experiential qualities of places and buildings.
- To develop the student's design ability through project work that emphasises spatial, formal, tactile and acoustic characteristics of buildings and places
- To develop the student's understanding the character and quality of buildings through the analysis of precedent

LEARNING OUTCOMES

Upon the successful completion of this module, the student should be able to:

- Explain the organising concept for a design proposition verbally and in drawings and/or physical models.
- Analyse a design brief and its physical and social context differentiating between potentially conflicting requirements
- Design a small building that responds to the functional requirements of a clearly defined brief with a well-ordered architectural solution

INDICATIVE CONTENT

There will be an integrated sequence of design and design analysis projects submitted in a single studio portfolio with one third of the marks assigned to projects set in each of the three modules. The assignments associated with ACAA4001 Architecture Studio 1B (Space and Form) may include

- a series of design exercises exploring space, form, material, colour, texture and sound
- design of an interior space in response to a defined brief
- alteration or adaption of an existing space in response to a defined brief
- design of a dwelling for a specified individual or group or other domestic scale building in a real context developed in detail

LEARNING AND TEACHING STRATEGY

In this module students build on the basic design skills acquired in ACAA4000 Architecture Studio 1A (Design Skills). In a varied sequence of projects students apply observational and analytical methods to further develop an understanding of the nature of architectural space, form and place-making. Students respond (usually individually but sometimes in groups) to a

brief or proposition. Ideas are developed using a variety of graphic and computer-based methods supported by discussion with tutors, fellow students and others. Proposals are presented using drawings, sketchbooks, physical models and digital images, often accompanied by explanatory text.

Scheduled learning: Regular studio sessions include: group project briefings, studio lectures, workshops, site visits, group tutorial sessions. Formative feedback is continuous in tutorial session and reviews in which students present their work to fellow students, tutors and sometimes visitors.

Independent learning. Between scheduled studio sessions students work independently both individually and collaboratively to develop their design ideas, carry out project related research and read relevant texts.

Study Time Allocation

The allocation of teaching to deliver the module is:

Activity type	Hours	Percentage
Scheduled learning	48	24%
Structured Learning	12	6%
Independent learning	140	70%
Placement learning		
TOTAL	200	100%

ARB*/RIBA criteria addressed in this module - * Due to national level changes, ARB prescription of Part 1 (BSc Architecture) will end on December 31st 2027. However, the programme will continue to map to the ARB criteria.	
Ability to create architectural designs that satisfy both aesthetic and technical requirements	GC1
develop a conceptual and critical approach to architectural design that integrates and satisfies the aesthetic aspects of a building and the technical requirements of its construction and the needs of the user	1.3
Understanding of the relationship between people and buildings, and between buildings and their environment, and the need to relate buildings and the spaces between them to human needs and scale.	GC5
the needs and aspirations of building users;	5.1
the impact of buildings on the environment, and the precepts of sustainable design;	5.2
Understanding of the methods of investigation and preparation of the brief for a design project.	GC7
the need to critically review precedents relevant to the function, organisation and technological strategy of design proposals;	7.1
Understanding of the structural design, constructional and engineering problems associated with building design.	GC8
the investigation, critical appraisal and selection of alternative structural, constructional and material systems relevant to architectural design;	8.1
strategies for building construction, and ability to integrate knowledge of structural principles and construction techniques;	8.2
the physical properties and characteristics of building materials, components and systems, and the environmental impact of specification choices.	8.3
Adequate knowledge of physical problems and technologies and the function of buildings so as to provide them with internal conditions of comfort and protection against the climate.	GC9
principles associated with designing optimum visual, thermal and acoustic environments;	9.1
systems for environmental comfort realised within relevant precepts of sustainable design;	9.2
strategies for building services, and ability to integrate these in a design project.	9.3
RIBA THEMES AND VALUES AT PART ONE LEVEL	T&V
Design pedagogies and architectural expression: critically evaluating authentic aesthetic, compositional, and spatial principles to synthesise socially, ecologically, and environmentally sustainable integrated studio projects.	5
GRADUATE ATTRIBUTES AT PART ONE LEVEL	GA
understanding of the alternative materials, processes and techniques that apply to architectural design and building construction;	3

AIM(S)

- To introduce students to the core skill of the architect – the design of objects, buildings and spaces to meet the needs and aspirations of people – with an emphasis on the importance of material properties and construction methods as design generators.
- To develop the student's design ability through project work that emphasises the properties of materials and constraints imposed by the environmental context
- To develop the student's understanding the performance of buildings through the analysis of precedent

LEARNING OUTCOMES

Upon the successful completion of this module, the student should be able to:

- Apply the fundamental principles of structure, material properties, environmental comfort and building physics to the design of a small building and explain how the technical and material choices inform the architectural intentions of the design
- Describe the concepts of sustainability and value in relation to building design
- Design a small building that responds to the functional requirements of a defined brief with a well-ordered technical solution and accurately describe the general arrangement of structure and building envelope in drawings

INDICATIVE CONTENT

This module will be taught in sequence with ACAA4001 Architecture Studio 1B (Space and Form). There will be an integrated sequence of design and design analysis projects submitted in a single portfolio with one third of the marks assigned to projects set in each of the three design modules. Case study of an existing building including analysis of structure, construction, environmental strategy and performance. Specific assignments may include:

- Detailed design of a staircase or other significant building element
- Design of a simple structure using a specified set of materials
- Detailed design submission

LEARNING AND TEACHING STRATEGY

In this module students build on the basic design skills acquired in ACAA4000 Architecture Studio 1A (Design Skills). It is taught in sequence with ACAA4001 Architecture Studio 1B (Space & Form) with a strong emphasis on the integration of knowledge of construction technology into design proposals.

In a varied sequence of projects students apply observational and analytical methods to further develop their design thinking. Students respond (usually individually but sometimes in groups) to a brief or proposition. Ideas are developed using a variety of graphic and computer-based methods supported by discussion with tutors, fellow students and others. Proposals are presented using drawings, sketchbooks, physical models and digital images, often accompanied by explanatory text.

Scheduled learning: Regular studio sessions include: group project briefings, studio lectures, workshops, site visits, group tutorial sessions. Formative feedback is continuous in tutorial

session and reviews in which students present their work to fellow students, tutors and sometimes visitors.

Independent learning. Between scheduled studio sessions students work independently both individually and collaboratively to develop their design ideas, carry out project related research and read relevant texts.

Study Time Allocation

The study time for the module is divided as follows:

Activity type	Hours	Percentage
Scheduled learning	48	24%
Structured Learning	12	6%
Independent learning	140	70%
Placement learning		
TOTAL	200	100%

Module Code	ACAA4003
Title	History and Theory 1
Date	13/07/2024
Level	4
Credits	20
Pre-Requisites	None

ARB*/RIBA criteria addressed in this module - * Due to national level changes, ARB prescription of Part 1 (BSc Architecture) will end on December 31st 2027. However, the programme will continue to map to the ARB criteria.	
Adequate knowledge of the histories and theories of architecture and the related arts, technologies and human sciences.	GC2
the cultural, social and intellectual histories, theories and technologies that influence the design of buildings;	2.1
the influence of history and theory on the spatial, social, and technological aspects of architecture;	2.2
Knowledge of the fine arts as an influence on the quality of architectural design.	GC3
how the theories, practices and technologies of the arts influence architectural design;	3.1
the creative application of the fine arts and their relevance and impact on architecture;	3.2
Adequate knowledge of urban design, planning and the skills involved in the planning process.	GC4
theories of urban design and the planning of communities;	4.1
the influence of the design and development of cities, past and present on the contemporary built environment;	4.2
Understanding of the relationship between people and buildings, and between buildings and their environment, and the need to relate buildings and the spaces between them to human needs and scale.	GC5
the needs and aspirations of building users;	5.1
Understanding of the profession of architecture and the role of the architect in society, in particular in preparing briefs that take account of social factors.	GC6
the nature of professionalism and the duties and responsibilities of architects to clients, building users, constructors, co-professionals and the wider society;	6.1
the potential impact of building projects on existing and proposed communities.	6.3
RIBA THEMES AND VALUES AT PART ONE LEVEL	T&V
Histories, Theories, and Methodologies: critically analysing and researching narratives and cultural, environmental, and social values in architecture to understand and extend architectural pedagogy.	4
GRADUATE ATTRIBUTES AT PART ONE LEVEL	GA
ability to evaluate evidence, arguments and assumptions in order to make and present sound judgments within a structured discourse relating to architectural culture, theory and design;	4

AIMS

- To provide students with a basic knowledge of the history of European architecture and urban design set in the context of the development of arts and culture in the United Kingdom in general and Wales in particular and a basic knowledge of main global architectural traditions.

LEARNING OUTCOMES

Upon the successful completion of this module, the student should be able to:

- Describe in outline the main styles and movements in architecture and urban design in Europe from classical times to the present
- Give a clear account of the architectural character of Wales in the context of the UK as a whole.

INDICATIVE CONTENT

- Architecture of the ancient world
- Romanesque and Gothic architecture
- Art and architecture of the Renaissance and Baroque
- Neoclassicism
- Architecture in the industrial revolution
- Architecture of the 20th century – Modernism and other traditions
- Contemporary architecture and urban design
- Global perspectives

LEARNING AND TEACHING STRATEGY

Lectures, on-line teaching resources and guided reading cover the material in a chronological sequence. Seminars give students the opportunity to explore particular periods styles and/or exemplary buildings in detail and assist them in the critical evaluation of knowledge acquired.

Study Time Allocation

The study time for the module is divided as follows:

Activity type	Hours	Percentage
Scheduled learning	48	24%
Independent learning	152	76%
Placement learning		
TOTAL	200	100%

Module Code	ACAA4004
Title	Technology and Environment 1
Date	13/07/2024
Level	4
Credits	20
Pre-Requisites	None

ARB*/RIBA criteria addressed in this module - * Due to national level changes, ARB prescription of Part 1 (BSc Architecture) will end on December 31st 2027. However, the programme will continue to map to the ARB criteria.	
Understanding of the relationship between people and buildings, and between buildings and their environment, and the need to relate buildings and the spaces between them to human needs and scale.	GC5
the impact of buildings on the environment, and the precepts of sustainable design;	5.2
Understanding of the methods of investigation and preparation of the brief for a design project.	GC7
the need to critically review precedents relevant to the function, organisation and technological strategy of design proposals;	7.1
Understanding of the structural design, constructional and engineering problems associated with building design.	GC8
the investigation, critical appraisal and selection of alternative structural, constructional and material systems relevant to architectural design;	8.1
strategies for building construction, and ability to integrate knowledge of structural principles and construction techniques;	8.2
the physical properties and characteristics of building materials, components and systems, and the environmental impact of specification choices.	8.3
Adequate knowledge of physical problems and technologies and the function of buildings so as to provide them with internal conditions of comfort and protection against the climate.	GC9
principles associated with designing optimum visual, thermal and acoustic environments;	9.1
systems for environmental comfort realised within relevant precepts of sustainable design;	9.2
strategies for building services, and ability to integrate these in a design project.	9.3
RIBA THEMES AND VALUES AT PART ONE LEVEL4	T&V
Structures, Construction, and Resources: demonstrating climate literacy, responsible specification, and ethical sourcing to enhance wellbeing, minimise embodied carbon, waste, and pollution, and reduce demands on energy and water.	3
Health and Life Safety: Demonstrating authoritative knowledge of statutory frameworks to safeguard the community and the end user.	1
GRADUATE ATTRIBUTES AT PART ONE LEVEL	GA
understanding of the alternative materials, processes and techniques that apply to architectural design and building construction;	3

AIMS

- To provide the student with a basic knowledge of the principles of building construction and structural design.
- To provide the student with a basic knowledge of the key concepts of building physics and low carbon building design

LEARNING OUTCOMES

Upon the successful completion of this module, the student should be able to:

- Describe accurately appropriate methods of construction of small domestic buildings in the UK
- Describe accurately the principles that inform the selection of materials and structural strategies for buildings
- Explain the principles of energy consumption and conservation in the construction and use of buildings

INDICATIVE CONTENT

- Design principles for load-bearing structures, building frames, short and long span structures
- Domestic masonry and timber frame construction including innovative methods
- Properties of most common building materials – including timber, masonry, metals, concrete.
- Key environmental design concepts including comfort, efficiency and sustainability
- Heat transfer in buildings: conduction, convection and radiation including calculation of U values, embodied energy, energy inputs
- Low carbon building strategies and typologies

LEARNING AND TEACHING STRATEGY

Lectures, online teaching resources and guided reading will introduce the key concepts and principles. In-class workshops and seminars will introduce practical examples, which will be used to support the application, discussion, and critical evaluation of knowledge acquired. Case studies will also be used to develop understanding and application of the principles.

The teaching of technology and environment will align and run parallel with the design studio projects to provide a holistic pedagogy by integrating technology and performance criteria in to student design proposals.

Study Time Allocation

The study time for the module is divided as follows:

Activity type	Hours	Percentage
Scheduled learning	48	24%
Independent learning	152	76%
Placement learning		
TOTAL	200	100%

ASSESSMENT

Assessment Component 1

☐ Written exam ☒ Coursework ☐ Practical

Mode of assessment	Volume	Weighting
Practical exercises completed outside class	2,000 words	50%

Assessment Component 2

☐ Written exam ☒ Coursework ☐ Practical

Module Code	ACAA4005
Title	The Modern World
Date	13/07/2024
Level	4
Credits	20
Pre-Requisites	None

ARB*/RIBA criteria addressed in this module - * Due to national level changes, ARB prescription of Part 1 (BSc Architecture) will end on December 31st 2027. However, the programme will continue to map to the ARB criteria.	
Adequate knowledge of the histories and theories of architecture and the related arts, technologies and human sciences.	GC2
the cultural, social and intellectual histories, theories and technologies that influence the design of buildings;	2.1
the influence of history and theory on the spatial, social, and technological aspects of architecture;	2.2
Adequate knowledge of urban design, planning and the skills involved in the planning process.	GC4
theories of urban design and the planning of communities;	4.1
the influence of the design and development of cities, past and present on the contemporary built environment;	4.2
Understanding of the relationship between people and buildings, and between buildings and their environment, and the need to relate buildings and the spaces between them to human needs and scale.	GC5
the impact of buildings on the environment, and the precepts of sustainable design;	5.2
Understanding of the profession of architecture and the role of the architect in society, in particular in preparing briefs that take account of social factors.	GC6
the nature of professionalism and the duties and responsibilities of architects to clients, building users, constructors, co-professionals and the wider society;	6.1
RIBA THEMES AND VALUES AT PART ONE LEVEL	T&V
Histories, Theories, and Methodologies: critically analysing and researching narratives and cultural, environmental, and social values in architecture to understand and extend architectural pedagogy.	4
GRADUATE ATTRIBUTES AT PART ONE LEVEL	GA
ability to evaluate evidence, arguments and assumptions in order to make and present sound judgments within a structured discourse relating to architectural culture, theory and design;	4
knowledge of the context of the architect and the construction industry, and the professional qualities needed for decision making in complex and unpredictable circumstances;	5

AIMS

- To provide students with a broad appreciation of the key concepts that have shaped the modern world and the main strands of thinking that influence the conception, design and construction of places and buildings.
- To develop knowledge and understanding of current issues in the built environment
- To develop academic and professional research and writing skills

LEARNING OUTCOMES

Upon the successful completion of this module, the student should be able to:

- Engage in an informed discussion of the key ideas that influence the form and character of settlements and buildings
- Explain what is meant by the 'built environment' and outline current issues influencing the way the industry functions.
- Investigate and report on a concept or issue in an academically rigorous manner.
- Structure a professional standard of report

INDICATIVE CONTENT

- The idea of progress
- Science and its methods
- What is philosophy?
- What is cultural theory?
- Key economic concepts
- Environmentalism
- The built environment and its industries.
- Academic and professional writing and research methods: essays, dissertations, papers, reports minutes, letters, email.
- Defining an issue, evidence, sources of information, references and bibliographies, time management, structuring an assignment, critical thinking, plagiarism, examination technique.

LEARNING AND TEACHING STRATEGY

The teaching and learning strategy for this module aims to provide students with theoretical knowledge and practical skills. Lectures and focused reading introduce concepts and principles. Seminars offer students the opportunity to present, discuss and critically evaluate ideas in a collaborative and supportive atmosphere, and case studies are used to illuminate the ideas introduced in lectures and literature

Study Time Allocation

The study time for the module is divided as follows:

Activity type	Hours	Percentage
Scheduled learning	48	24%
Independent learning	152	76%
Placement learning		
TOTAL	200	100%

MODULE CODE: ACBA4000
TITLE: Estimating & Measurement of Work within a Construction Environment
DATED: 16/08/2018
LEVEL: 4
CREDITS: 20
JACS CODE: K240

AIM

- To provide students with an understanding of the quantity surveying techniques of measurement and the estimation of rates for inclusion in tendering documents using the RICS New rules of measurement.

LEARNING OUTCOMES

Upon the successful completion of this module, the student should be able to:

- Define standard measurement techniques used for taking off quantities for estimating purposes.
- Define the data necessary for inclusion into a tender document for competitive pricing.
- Interpret the principles and techniques of estimating in compiling a contract sum.

INDICATIVE CONTENT

- The RICS New Rules of Measurement and applications when taking off residential and smaller commercial buildings.
- Introduction to other Methods of measurement in common use.
- Estimating price books and software – use and limitations
- Building up Unit Rates for key components and elements.
- Use of approximate quantities
- Techniques for quantifying budgets
- The preparation of tender documents
- The tendering process
- Adjudication
- Post Tender and Post Construction Review.
- Use of estimating data in the Construction stage.
- Linkages with BIM models and whole-life facilities management.

LEARNING AND TEACHING STRATEGY

The study time for the module is divided as follows:

Activity type	Hours	Percentage
Scheduled learning	48	24%
Independent learning	152	76%
Placement learning	0	0%
TOTAL	200	100%

MODULE CODE: ACBA4001
TITLE: Fundamentals of Construction Technology
DATED: 16/08/2018

LEVEL: 4
CREDITS: 20

JACS CODE: K200

AIM

- To cultivate the fundamental principles, materials and techniques commonly utilised in the construction of low rise residential and commercial buildings, and their related repair requirements following defect diagnosis

LEARNING OUTCOMES

Upon the successful completion of this module, the student should be able to:

- Describe appropriate site evaluation, site and soil investigation techniques.
- Identify the different types of substructure available for a range of low-rise building systems and techniques used in their production.
- Define and produce annotated sketches that illustrate a broad range of common constructional forms, demonstrating understanding of their potential defect and repair needs.

INDICATIVE CONTENT

- The *function and performance* criteria that need to be addressed in buildings, their elements, components and materials.
- Building Materials: Building terminology and definitions. The initial focus will be on smaller domestic and commercial building types in order to reinforce principles.
- Statutory Standards applicable to construction.
- Groundwork and Foundations, Site evaluation and site investigation. Functional requirements of foundations, and appreciation of the relationship with ground conditions and underlying geology. Methods of constructing.
- Introduction to the functions of foundations causes of ground movement, subsoil bearing capacity and types of foundations for low-rise, short-span buildings, small framed buildings and portals less than ten metres span. Damp Proof Membranes (dpm) trays, thermal bridging etc;
- Health and Safety measures that are applicable to the construction production and maintenance of low-rise building forms.
- Supported and suspended ground and inter-mediate floors;
- Functional requirements of external walls: thermal insulation; Solid, layered and Cavity loadbearing Masonry construction; Heavy and lightweight forms, Thermal performance; timber and cold rolled steel framed construction: damp proof courses (dpc's); Modular methods.
- Openings in Cavity Walls – avoidance of rainwater penetration, condensation and thermal bridging.
- Roofs - Functional requirements of timber roof structures: cut roofs and trussed rafter roofs.

- Pitched roof coverings: double-lap, single-lap and interlocking slates and tiles, lightweight sheet metal roof-coverings. Eaves; verges; valleys; ridges and abutments.
- Windows, doors and external joinery - functional requirements of differing types of frames; glazing and sill/reveal details with increasing emphasis upon their thermal performance, methods of securing, durability etc.
- Staircases and ramps - Functional requirements for simple stairs to comply with Building Regulations Approved Documents: A, B, K and M.
- Access for all. Inclusive design.
- Floor; Wall; Ceiling Finishes; Skirting and Architraves; Rendering:
- Identification of typical defects and remedial techniques. Non-traditional housing, prefabrication and industrial systems - the legacy and their repair needs.
- Modern Methods of Construction. Innovative low technology building methods such as ground-sheltered structures, passive solar design, low carbon buildings. Building assessment standards such as Passivhaus, Living Buildings; Modular construction. Prefabrication both past and Present. Learning from the past to inform future practices.

LEARNING AND TEACHING STRATEGY

The study time for the module is divided as follows:

Activity type	Hours	Percentage

MODULE CODE: ACBA4002
TITLE: Digital Surveying
DATED: 16/08/2018

LEVEL: 4
CREDITS: 20

JACS CODE: K200

AIM

- To provide learners with the skills in linear surveys, levelling surveys, measured building surveys and construction projects

LEARNING OUTCOMES

Upon the successful completion of this module, the student should be able to:

- Demonstrate knowledge of the underlying concepts and basic principles of Surveying
- Present, and interpret data obtained through linear and levelling surveys to produce drawings and vertical differentiation
- Conduct and evaluate measured building surveys

INDICATIVE CONTENT

- Introduction to practical Surveying:
 - basic survey methods; land surveying; accuracy and precision; reconnaissance and creating frameworks; control; errors.
- Introduction to equipment types and measurement:
 - flying levels; using equipment including automatic levels; tilting levels; rotating lasers; barcode levels, GPS, aerial equipment;
 - Measurements - references; working from whole to the part; linear measurement on horizontal and sloping ground using tapes; chain surveys; errors in chaining; running measurements; offsets and ties; drawings in CAD; plotting drawings to scale
- Terminology and recording data:
 - datum; references; Ordnance Survey Bench Mark; Temporary Bench Mark; height of collimation and rise and fall; spot heights on plans; sections; areas and volumes; levels for buildings; drawing in CAD; plotting drawings to scale
- Drawings and computational plotting:
 - freehand sketching of plans, elevations and sections; recording information; measuring features; measuring historic buildings;
 - point clouds; editing; 2D & 3D; drawing in CAD; plotting drawings to scale
 - software for capturing data in the field; dedicated software for setting out; built-in capabilities of total station instruments; commercial software and programmed spreadsheets to facilitate repetitive surveying calculations; Geographical Information Systems (GIS)

- Cartographic detailing of construction works:
 - Raw data and translation for cartographic detail/setting out;
 - levelling; plotting contours by graphic interpolation;
 - plotting of cross-sections from contoured plans;
 - area measurement (manual, mechanical, electronic methods);
 - computation of volumes from spot heights; ground sections and contours;
 - Calculations of volumes of cut and fill (straight road with transverse sloping ground).
 - Angular measurement: correction to measured angles, distances, bearings and coordinates for a closed traverse, manual and electronic plotting of traverse surveys, survey symbols.
 - Setting out: computation of deflection angles; distances for coordinated setting out.

MODULE CODE: ACBA4003
TITLE: Managing Health, Safety, Welfare and Risk in Construction
DATED: 16/08/2018

LEVEL: 4
CREDITS: 20

JACS CODE: K200

AIM

- To develop awareness of the health and safety challenges and risks that working within the construction and built environment sector poses.

LEARNING OUTCOMES

Upon the successful completion of this module, the student should be able to:

- Interpret the application of Construction Design and Management (CDM) regulations and the wider Health and Safety legislation whilst working with clients, contractors and other professionals.
- Determine how Health, Safety and Welfare legislation influences working practices in the construction industry, how it is managed on site and the potential impacts that this might have.

INDICATIVE CONTENT

- Outlining general and specific hazards and risks in the construction industries. Hazard statistics.
- The Health and Safety etc. Act and other principal pieces of legislation and regulations.
- Obligations of all parties involved in works under current legislation.
- Knowledge and skills required to assist clients and other professionals to meet their obligations.
- Site Organisational and communication systems to ensure compliance with Health, Safety and Welfare legislation.
- Assess resources to deliver a construction project in compliance with current legislation.
- Statutory obligations for employees' welfare when undertaking projects and consultancy work.
- Preparation of Risk Assessments.
- Evaluation of Working Methods to comply with Health, Safety and Welfare for case study based projects.
- Planning to ensure compliance with Health, Safety and Welfare for specified projects.
- Evaluation of the roles of Principal Designer and Principal Contractor.
- Production of Management Plans for projects.
- Processes to mitigate and deal with breaches of Health and Safety requirements.

MODULE CODE: ACBA4004
TITLE: Soft Skills, Contract and Legal Responsibilities within the Built Environment
DATED: 16/08/2018
LEVEL: 4
CREDITS: 20

JACS CODE: K200

AIM

- To fully develop learners' professional and academic skills, along with the introduction of all relevant areas of law for the built environment.

LEARNING OUTCOMES

Upon the successful completion of this module, the student should be able to:

- Explain the professional structure of the built environment and current issues influencing the way the industry functions; and investigate and report on an issue in an academic manner.
- Understand and apply relevant legislative and compliance frameworks associated with the construction industry.

INDICATIVE CONTENT

Soft Skills:

- The current professional structure of the built environment and critical issues influencing its functions, including professions, government control, the housing market, climate change imperatives.
- The purposes of a professional report including preparation and planning, writing style, collection of information and review.
- Setting learning and employment goals using SMART targets, the KOLB cycle, Personal Development Plans and their review, CPD and lifelong learning.

Contract and legal responsibilities:

- Administration of the law, including background of development.
- Legal requirements of tendering.
- The influence and impact of planning and building regulations on construction activities
- The legal principles of construction contracts; including differing types of contracts, contractual responsibilities of parties, monitoring to ensure compliance and claims
- Methods for dispute resolution
- Tort Law and its applicability to construction projects, including insurances
- Land law including history & development of land ownership, landlord & tenant law and issues relating to boundary / party walls
- Planning & Environmental regulations and Policies
- Health and Safety policies

LEARNING AND TEACHING STRATEGY

The study time for the module is divided as follows:

Activity type	Hours	Percentage

MODULE CODE: ACBA4005
TITLE: Working with Digital Technologies & BIM
DATED: 16/08/2018

LEVEL: 4
CREDITS: 20

JACS CODE: K200

AIM

- To provide learners with the skills needed to produce two and three-dimensional drawings using industry-standard computer-aided design (CAD) software and to provide learners with an understanding of the information delivery cycle in Building Information Modelling (BIM).

LEARNING OUTCOMES

Upon the successful completion of this module, the student should be able to:

- Interpret data and produce 2D drawings using industry-standard CAD software applications
- Produce 3D models using industry-standard CAD software applications
- Evaluate different sources of information so as to prepare Building Information Models using industry standard software

INDICATIVE CONTENT

- Fundamentals of BIM
- Producing a data model:
 - 2 Dimensional (2D) plans
 - 3 Dimensional (3D) models
- Developing digital data for built structures
- Extracting BIM data from a prepared model

LEARNING AND TEACHING STRATEGY

The study time for the module is divided as follows:

Activity type	Hours	Percentage
Scheduled learning	48	24%
Independent learning	152	76%
Placement learning	0	0
TOTAL	200	100%

ASSESSMENT

Assessment Component 1

MODULE CODE: ACBA4007
TITLE: Engineering Mathematics and Structures
DATED: 16/08/2018

LEVEL: 4
CREDITS: 20

JACS CODE: K200

AIM

- To provide the students with the requisite knowledge and understanding of mathematics to assess the properties of structural components and their behaviour, while developing an understanding of structural mechanics so as to undertake the design of simple structural elements.

LEARNING OUTCOMES

Upon the successful completion of this module, the student should be able to;

- Demonstrate an understanding and be able to calculate bending moments and shear forces for simply supported beams and cantilevers and determine forces in pin-jointed framework.
- Assess and apply the design requirements of columns under axial loading and simply supported beams in steel, reinforced concrete and timber.
- Explore the structural behaviour of gravity retaining walls.

INDICATIVE CONTENT

- Determine areas under a curve, volume of revolution, centroids, second moment of area and moment of inertia using integration techniques.
- Calculation of bending moments and shear forces in simply supported and cantilever beams with point and distributed loading and draw the bending moment and shear force diagrams.
- Calculation of forces in pin jointed frames using resolution of forces.
- Design a steel beam and a column
- Design a reinforced concrete beam and a column.
- Design a timber beam and a column.
- Design a soil and water retaining wall to satisfy sliding and ground-bearing capacity requirements.

LEARNING AND TEACHING STRATEGY

The study time for the module is divided as follows:

Pre-Requisites	None
DBS Check	May be required ☐ Not required ☒

AIM(S)

- To provide an understanding of the complexity of issues related to the provision of comfort levels in buildings.

LEARNING OUTCOMES

Upon the successful completion of this module, the student should be able to:

- explain the principles that underpin the design of space heating, lighting provision and sound management approaches;
- calculate basic heat losses and gains, sound insulation properties and lighting requirements for building spaces.

INDICATIVE CONTENT

- Principles of Heat, Sound and Light.
- Propagation through mediums. Systems and scales of measurement, definitions of terms.
- Artificial and Natural lighting, correlated colour, specifications, and the Lumen method for lighting design.
- Perception of Sound and Light, Frequency, Wavelength, Amplitude. Measuring sound outdoors and building acoustics.
- Resonance, Power and Intensity, Reflection, Transmission and Absorption coefficients.
- U value, R value, heat losses and gains.
- Principles in consideration of Composite partitions.

AIM(S)

- To provide students with a fundamental understanding of the properties, use and application of construction framing materials, and comprehend the complexity of issues related to their production and emplacement.

LEARNING OUTCOMES

Upon the successful completion of this module, the student should be able to:

- describe the underlying physical and mechanical properties of building framing materials, applying scientific principles to evaluate material choice for performance, sustainability and environmental considerations;
- gather data utilising the correct methodology for testing and analyse the results.

INDICATIVE CONTENT

- The three framing materials, timber, concrete and steel.
- Production processes of timber, concrete and steel.
- Materials needed for production / quality controls.
- Physical and mechanical properties.
- Testing methodologies / Defects / Corrosion.
- Reinforcement position / pre / post stressing.
- Bracing, Wind Loading.
- Additive manufacturing.

AIM(S)

- To provide learners with the digital skills in building surveys and highway design.

LEARNING OUTCOMES

Upon the successful completion of this module, the student should be able to:

- conduct and evaluate measured building surveys using digital technology.

INDICATIVE CONTENT

- Introduction to practical Surveying: History and different classifications of surveying.
- Introduction to surveying equipment types and measurement: Traditional and modern surveying equipment.
- Emphasis on application of digital survey equipment such as GPS, Total Station and Drones including demonstration classes.
- Application of digital survey tools in conducting building surveys (Demonstration class on drones application in building survey).
- How the Internet of things, Artificial intelligence, big data, predictive analytics, automation and robotics are utilised within construction.
- Road alignment: design of vertical and horizontal curvature on the highway.
- Introduction to highway design including flexible and non-flexible paving.
- Sustainable highway design.

AIM(S)

- To provide learners with the skills needed to produce two dimensional drawings using industry-standard computer-aided design (CAD) software and to provide learners with an understanding of standards and collaborative practice in the construction industry.

LEARNING OUTCOMES

Upon the successful completion of this module, the student should be able to:

- interpret data and produce 2D drawings using industry-standard CAD software applications;
- understand Building Information Modelling (BIM) naming conventions.

INDICATIVE CONTENT

- Fundamentals of technical drawing.
- Origin and development of Construction industry drawing conventions, standards for collaborative practice.
- Line weight, Line type, scale, shading and depth.
- Producing 2D CAD drawings using industry recognised software.
- Co-ordination of technical drawings using geometry through orthographic projection.
- Understanding digital drawing scale and digital output scale.
- Collaboration of drawn information through British Standard conventions.
- Introduction to BIM process of naming/ filing conventions to International Recognised standards.

AIM(S)

- To provide learners with the skills in linear surveys, levelling surveys, measured building surveys and construction projects.

LEARNING OUTCOMES

Upon the successful completion of this module, the student should be able to:

- demonstrate knowledge of the underlying concepts and basic principles of Surveying;
- present, and interpret data obtained through linear and levelling surveys to produce drawings and vertical differentiation.

INDICATIVE CONTENT

- Introduction to practical Surveying: basic survey methods; accuracy and precision.
- Introduction to equipment types and measurement.
- Terminology and recording data.
- Drawings and computational plotting.
- Cartographic detailing of construction works.
- Levelling; procedures and contour level computation.
- Plotting of contours using the spot level and computation of volume of earthworks.
- Transverse surveying.

AIM(S)

- To provide a solid grounding in the mathematical skills required for civil engineering.

LEARNING OUTCOMES

Upon the successful completion of this module, the student should be able to:

- evaluate the appropriate mathematical approach to take to civil engineering problems;
- calculate a variety of civil engineering based mathematical problems.

INDICATIVE CONTENT

- Trigonometry: calculation of side lengths and angles of triangles.
- Algebra: solving linear, quadratic and simultaneous equations.
- Matrices: solving equations using matrices.
- Calculus (differentiation and integration of functions of one variable, introduction to partial differentiation).
- Mensuration: calculation of area, and volume of different geometric figures.

AIM(S)

- To cultivate the fundamental principles, materials and techniques commonly utilised in the construction of low rise residential and commercial buildings, and their related repair requirements following defect diagnosis.

LEARNING OUTCOMES

Upon the successful completion of this module, the student should be able to:

- analyse site evaluation, site and soil investigation techniques;
- evaluate the different types of sub-structure available for a range of low-rise building systems and techniques used in their production;
- interpret and produce annotated sketches that illustrate a broad range of common constructional forms, demonstrating understanding of their potential defect and repair needs.

INDICATIVE CONTENT

- The function and performance criteria that need to be addressed in buildings, their elements, components and materials.
- Building Materials: Building terminology and definitions. The initial focus will be on smaller domestic and commercial building types in order to reinforce principles.
- Statutory Standards applicable to construction.
- Groundwork and Foundations, Site evaluation and site investigation. Functional requirements of foundations, and appreciation of the relationship with ground conditions and underlying geology. Use of AI in providing cost savings and improving safety.
- Introduction to the functions of foundations causes of ground movement, subsoil bearing capacity and types of foundations for low-rise, short-span buildings, small framed buildings and portals less than ten metres span. Damp Proof Membranes (dpm) trays, thermal bridging etc.
- Health and Safety measures that are applicable to the construction production and maintenance of low-rise building forms.
- Supported and suspended ground and inter-mediate floors.

- Functional requirements of external walls: thermal insulation; Solid, layered and Cavity loadbearing Masonry construction; Heavy and lightweight forms, Thermal performance; timber and cold rolled steel framed construction: damp proof courses (dpc's); Modular methods.
- Openings in Cavity Walls – avoidance of rainwater penetration, condensation and thermal bridging.
- Roofs - Functional requirements of timber roof structures: cut roofs and trussed rafter roofs.
- Pitched roof coverings: double-lap, single-lap and interlocking slates and tiles, lightweight sheet metal roof-coverings. Eaves; verges; valleys; ridges and abutments.
- Windows, doors and external joinery - functional requirements of differing types of frames; glazing and sill/reveal details with increasing emphasis upon their thermal performance, methods of securing, durability etc.
- Staircases and ramps - Functional requirements for simple stairs to comply with Building Regulations Approved Documents: A, B, K and M.
- Access for all. Inclusive design.
- Floor; Wall; Ceiling Finishes; Skirting and Architraves; Rendering.
- Identification of typical defects and remedial techniques. Non-traditional housing, prefabrication and industrial systems - the legacy and their repair needs.
- Modern Methods of Construction. Innovative low technology building methods such as ground-sheltered structures, passive solar design, low carbon buildings. Building assessment standards such as Passivhaus, Living Buildings; Modular construction. Prefabrication both past and Present. Learning from the past to inform future practices.

Module Code	ACBA4023
Title	Health, Safety and Welfare
Date	20/05/2024
Level	4
Credits	10
Pre-Requisites	None
DBS Check	May be required ☐ Not required ☒

AIM(S)

- To develop awareness of the health and safety challenges and risks of working within the construction and built environment sector.

LEARNING OUTCOMES

Upon the successful completion of this module, the student should be able to:

- interpret the application of Building Safety Act, Construction Design and Management (CDM) regulations and the wider Health and Safety legislation whilst working with clients, contractors and other professionals;
- determine how Health, Safety and Welfare legislation influences working practices in the construction industry, how it is managed on site and the potential impacts that this might have.

INDICATIVE CONTENT

- Types of risk including economic and environmental.
- Outlining general and specific hazards and risks in the construction industries.
- The Health and Safety Act, Building Safety Act and other principal pieces of legislation and regulations.
- Obligations of all parties involved in works under current legislation.
- Understanding of the roles of Principal Designer and Principal Contractor.
- Site organisational and communication systems to ensure compliance.
- Assess resources to deliver a construction project in compliance with current legislation.
- Statutory obligations for employees' welfare when undertaking projects and consultancy work.
- Preparation of Risk Assessments.
- Evaluation of Working Methods of compliance through for case study projects.

Study Time Allocation

The study time for the module is divided as follows:

Activity type	Hours	Percentage
Scheduled learning	24	24%
Independent learning	76	76%
Placement learning		
TOTAL	100	100%

ASSESSMENT

Assessment Component 1

(Tick one)

☐ Written exam ☒ Coursework ☐ Practical

Mode of assessment	Volume	Weighting
Report	2,000 words or equivalent with drawings	100%

Assessment Summary

Activity type	Percentage
Written exam	
Coursework	100%

Module Code	ACBA4024
Title	Law for the Built Environment
Date	20/05/2024
Level	4
Credits	10
Pre-Requisites	None
DBS Check	May be required ☐ Not required ☒

AIM(S)

- To provide learners with the introduction to all relevant areas of law for the built environment.

LEARNING OUTCOMES

Upon the successful completion of this module, the student should be able to:

- understand and apply relevant legislative and compliance frameworks associated with the construction industry;
- apply this knowledge to a basic scenario.

INDICATIVE CONTENT

- Administration of the law including background.
- Principles of contract and criminal law.
- Methods of dispute resolution (including adjudication, arbitration, mediation, CIMAR rules).
- Tort law and its applicability to construction (including negligence, trespass, defective premises, nuisance, occupiers' liability, Rylands v Fletcher, breach of statutory duty).
- Land law, including history & development of land ownership, landlord & tenant law and issues relating to boundary / party walls.
- Business related legal obligations including company set-up, employment, environmental law, etc.

Study Time Allocation

The study time for the module is divided as follows:

Activity type	Hours	Percentage
Scheduled learning	24	24%
Independent learning	76	76%
Placement learning		
TOTAL	100	100%

Module Code	ACBA4025
Title	Measurement and Estimating
Date	20/05/2024
Level	4
Credits	20
Pre-Requisites	None
DBS Check	May be required ☐ Not required ☒

AIM(S)

- To develop the skills for measurement and estimating essential for quantity surveyors and estimators.

LEARNING OUTCOMES

Upon the successful completion of this module, the student should be able to:

- appraise standard measurement techniques and perform taking off of a variety of quantities;
- interpret the data necessary for estimating and prepare an estimate for a work activity.

INDICATIVE CONTENT

- Basic measurement techniques (including linear, area and volume).
- Introduction to estimating techniques for budgets at various project stages including preliminary, intermediate and final.
- Digital measurement using software packages.
- Introduction to New Rules of Measurement (NRM), Civil Engineering Standard Method of Measurement (CESMM) and Highway Method of Measurement for the measurement and recording of quantities.
- Understand measurement rules and use dimension sheets.
- Perform a basic take off of various elements.
- Calculation of unit rates in building up an estimate and adjustment of existing rates.
- Types of cost data (including Local, Spons and Building Cost Information Service (BCIS)).
- Preparation of a bill of quantities manually and using Building Information Modelling (BIM).

Study Time Allocation

The study time for the module is divided as follows:

Activity type	Hours	Percentage
Scheduled learning	48	24%
Independent learning	152	76%
Placement learning		
TOTAL	200	100%

Module Code	ACBA4026
Title	Procurement Process
Date	20/05/2024
Level	4
Credits	10
Pre-Requisites	None
DBS Check	May be required ☐ Not required ☒

AIM(S)

- To develop an understanding of the procurement process including decisions, the tendering options available and contracts within construction.

LEARNING OUTCOMES

Upon the successful completion of this module, the student should be able to:

- understand the possible procurement processes utilised in the UK;
- describe the tasks required as part of the procurement process.

INDICATIVE CONTENT

- Plan of Works (project stages, etc).
- Types of procurement (traditional, Design & Build (D&B), construction management, management contracting, collaboration).
- The various types of tendering and documentation required.
- Introduction to construction contracts (types).
- The legal principles of construction contracts; including differing types of contracts, contractual responsibilities of parties, monitoring to ensure compliance and claims.
- The influence and impact of planning and building regulations on construction activities.

Study Time Allocation

The study time for the module is divided as follows:

Module Code	ACBA4027
Title	Skills for Professional Practice
Date	20/05/2024
Level	4
Credits	10
Pre-Requisites	None
DBS Check	May be required ☐ Not required ☒

AIM(S)

- To provide the necessary written, numeracy and research skills for study, including sources of information.

LEARNING OUTCOMES

Upon the successful completion of this module, the student should be able to:

- understand how to write for both academic and professional practice, including the necessary skills for finding credible sources of information, utilising these without plagiarism, management of time and revision aids;
- understand the basic numeracy skills needed for construction professions, including basic trigonometry and statistics.

INDICATIVE CONTENT

- Study related skills including time management, writing skills (including reports and other types of writing), revision aids, etc.
- Referencing, sources, citations, plagiarism.
- Research and library skills.
- Fundamentals of mathematics (including BIDMAS, trigonometry, etc).
- Basic algebra, transposition, etc.
- An introduction to statistics including averages and standard deviation.
- An introduction to associated professional body expectations in terms of conduct, ethics, inclusivity, etc.

Module Code	ACBA4028
Title	Structural Mechanics
Date	20/05/2024
Level	4
Credits	20
Pre-Requisites	None
DBS Check	May be required ☐ Not required ☒

AIM(S)

- To provide students with skills to calculate the structural performance of materials used within the construction industry.

LEARNING OUTCOMES

Upon the successful completion of this module, the student should be able to:

- calculate centroids, the moment of inertia, reactions, shear force and bending moments;
- carry out beam analysis for determinate beams;
- draw associated shear force and bending moment diagrams for various frames.

INDICATIVE CONTENT

- Definition of key terms, the International System of Units (SI Unit); force, moment, stress and strain and some mathematical derivations/formula.
- Centroid and moment of inertia including calculation of the second moment of area of both regular and irregular shape.
- Analysis of determinate beams; simply supported and cantilever with different loads: point load, Uniformly Distributed Load (UDL) & combined.
- Bending Moment and Shear force calculation & diagram for determinate beams.
- Beams deflection and slope; at least one of moment area method or double integration.
- Truss: Calculation of forces in pin-jointed frames using resolution of forces.
- Introduction to (Computer Aided Design (CAD) for beam analysis.

MODULE CODE: ACBB003
TITLE: Professional Skills and Health & Safety in Construction
DATED: 14/10/2019

LEVEL: 4
CREDITS: 20

JACS CODE: K200

AIM

- To develop learners' professional and academic skills for the construction industry, along with awareness of the health and safety challenges and risks that working within the construction and built environment sector poses.

LEARNING OUTCOMES

Upon the successful completion of this module, the student should be able to:

- Investigate and write a report on an issue in an academic and professional manner.
- Interpret the application of Construction Design and Management (CDM) regulations and the wider Health and Safety legislation whilst working with clients, contractors and other professionals.
- Determine how Health, Safety and Welfare legislation influences working practices in the construction industry, how it is managed on site and the potential impacts that this might have.

INDICATIVE CONTENT

Academic and professional skills

- The current professional structure of the built environment and critical issues influencing its functions, including professions, government control, the housing market, climate change imperatives.
- The purposes of a professional report including preparation and planning, writing style, collection of information and review. Referencing and plagiarism.
- Setting learning and employment goals using SMART targets, the KOLB cycle, Personal Development Plans and their review, CPD and lifelong learning.

Health, Safety, Welfare and Risk

- Outlining general and specific hazards and risks in the construction industries. Hazard statistics.
- The Health and Safety etc. Act and other principal pieces of legislation and regulations.
- Obligations of all parties involved in works under current legislation.
- Knowledge and skills required to assist clients and other professionals to meet their obligations.
- Site Organisational and communication systems to ensure compliance with Health, Safety and Welfare legislation.
- Assess resources to deliver a construction project in compliance with current legislation.
- Statutory obligations for employees' welfare when undertaking projects and consultancy work.

- Preparation of Risk Assessments.
- Evaluation of Working Methods to comply with Health, Safety and Welfare for case study based projects.
- Planning to ensure compliance with Health, Safety and Welfare for specified projects.
- Evaluation of the roles of Principal Designer and Principal Contractor.
- Production of Management Plans for projects.
- Processes to mitigate and deal with breaches of Health and Safety requirements.

LEARNING AND TEACHING STRATEGY

The study time for the module is divided as follows:

Activity type	Hours	Percentage
Scheduled learning	48	24%

MODULE CODE: ACBB4004
TITLE: Introduction to Contract and Legal Responsibilities within the Built Environment
DATED: 14/10/2019
LEVEL: 4
CREDITS: 20
JACS CODE: K200

AIM

- To provide learners with the introduction of all relevant areas of law for the built environment.

LEARNING OUTCOMES

Upon the successful completion of this module, the student should be able to:

- Understand and apply relevant legislative and compliance frameworks associated with the construction industry.
- Be able to apply this knowledge to a basic scenario

INDICATIVE CONTENT

Contract and legal responsibilities:

- Administration of the law, including background of development.
- Legal requirements of tendering.
- The influence and impact of planning and building regulations on construction activities
- The legal principles of construction contracts; including differing types of contracts, contractual responsibilities of parties, monitoring to ensure compliance and claims
- Methods for dispute resolution
- Tort Law and its applicability to construction projects, including insurances
- Land law including history & development of land ownership, landlord & tenant law and issues relating to boundary / party walls
- An introduction to planning law
- Environmental regulations and Policies
- Employment law

Module Code	ACNA4004
Title	Contemporary Challenges: Making a Difference
Date	25/06/2020
Level	4
Credits	20
Pre-Requisites	None

AIM(S)

- To develop student's awareness and appreciation of contemporary challenges relevant to the discipline facing individuals, organisations, communities and society, from a local, national and global perspective.
- To develop creative problem-solvers through the application of knowledge to real-world problems.

LEARNING OUTCOMES

Upon the successful completion of this module, the student should be able to:

- Identify and evaluate historical and contemporary issues and their impact on today's global society.
- Apply appropriate collaborative working practices to manage conflict and support effective decision making.
- Implement Design Thinking techniques to investigate problems in order to generate and evaluate solutions.

INDICATIVE CONTENT

- Visions of the Future including digital transformation 4.0.
- How history, legislation and policy shape the world we live.
- Contemporary global issues, e.g. responsible stewardship, diversity, inclusion, ethics, culture and intercultural awareness.
- 'Wicked problems': the challenge of difficult or impossible problems where the affecting variables are not known or quantifiable.
- Design Thinking to investigate, define, propose and evaluate problem solutions.
- Recognising and overcoming cognitive bias.
- Decision making frameworks and techniques.
- Recognising individual differences and the role of emotional intelligence in the management of conflict.
- The role of diplomacy, persuasion and negotiation in effective collaboration.

- The significance of interdisciplinary thinking in finding effective solutions to problems.
- The role of ethics in identifying solutions.
- Collective decision-making.
- The power of raising awareness

Date	25/06/2020
Level	4
Credits	20
Pre-Requisites	None

AIM(S)

- To develop student's skills for independent study and life-long learning, which will form the foundations for successful completion of their degree programme and support future employment opportunities.

LEARNING OUTCOMES

Upon the successful completion of this module, the student should be able to:

- Demonstrate the foundational skills required to be a resilient and healthy independent learner.
- Practise the principles of learning agility
- Use suitable technology to support and enhance their learning experience within the discipline area

INDICATIVE CONTENT

- Time management, reading, writing, referencing and plagiarism, searching for and evaluating sources of information, working online.
- Critical thinking: issues concerning knowledge, belief, and doubt.
- Critical writing: synthesis, paraphrasing and creating an informed argument, avoiding plagiarism.
- Reflection and self-reflection.
- Identity and sense of place; including values, culture and intercultural awareness, heritage, diversity and inclusion and, multilingualism.
- Skills for a range of assessment modes, including blogs, vlogs, video, presentations, performances, posters, exams and written coursework.
- Skills and attitudes which underpin resilience, health, wellbeing and learning agility; the role of spirit, mind, emotions and body.
- Physical literacy: Consideration of the role of physical activity to the support of physical, mental health, well-being and resilience.
- Digital literacy: using appropriate technology; staying safe online, cyber security, digital identity.
- Team working.

Module Code	ACNA4007
Title	Physical Landscape and the Geosphere
Date	05/05/2021
Level	4
Credits	20
Pre-Requisites	None

AIM(S)

- To introduce students to how the Earth's lithosphere, hydrosphere, cryosphere, atmosphere and biosphere are dependent upon each other, interacting across a wide range of temporal and spatial scales. It will be stressed that the environment is dynamic and that the world is changing in accordance with known physical principles.

LEARNING OUTCOMES

Upon the successful completion of this module, the student should be able to:

- Express an understanding of Earth systems and their influence on the environment.
- Establish an understanding of the physical processes that influence the environment
- Complete practical fieldwork on a selected physical landscape.

INDICATIVE CONTENT

- Global Meteorology and circulatory systems
- Hydrological cycles and atmospheric moisture
- Geological environmental change
- Plate tectonics
- Lithospheric systems
- The fundamentals of weathering & erosion
- Slope processes and management
- Fluvio-glacial, glacial and periglacial processes and landforms
- Coastal geomorphology and Oceanography
- The formation and classification of soils
- Physical landscape fieldwork
- The physical landscape and human influences

Study Time Allocation

The study time for the module is divided as follows:

Activity type	Hours	Percentage
Scheduled learning	48	24%
Independent learning	152	76%
Placement learning		
TOTAL	200	100%

ASSESSMENT

Assessment Component 1

(Tick one)

☐ Written exam ☒ Coursework ☐ Practical

Mode of assessment	Volume	Weighting
Field Report	2000 words	50%

Assessment Component 2

(Tick one)

☒ Written exam ☐ Coursework ☐ Practical

Mode of assessment	Volume	Weighting
Examination	2 hours	50%

Assessment Summary

Activity type	Percentage
Written exam	50%
Coursework	50%
Practical	
TOTAL	100%

INDICATIVE READING LIST

Module Code	ACNA4007	
Module Title	Physical Landscape and the Geosphere	
Classification	Reading List entry	Electronic*

Module Code	ACNB4003
Title	Climate Change and Visual Activism
Date	02/03/2023
Level	4
Credits	20
Pre-Requisites	None

AIM(S)

- To inform an awareness and appreciation of the complexities surrounding earth science and climate change and the need for a combined approach for active and persuasive communication.

LEARNING OUTCOMES

Upon the successful completion of this module, the student should be able to:

- Identify how earth's evolution influences the environment
- Apply an understanding of climate science to environmental and social change.
- Implement contemporary strategies and creative methods for communicating and persuading the need for behavioural change.

INDICATIVE CONTENT

- Earth Systems
- Climatology and meteorology
- Impacts upon biological processes
- Mitigation and adaptation
- Social change and migration
- Resource scarcity and growing the green economy
- Managing the disconnect with nature
- Environmental and climate change activism
- Environmental photography and documentaries
- Contemporary strategies and community action

Study Time Allocation

The study time for the module is divided as follows:

Activity type	Hours	Percentage
Scheduled learning	48	24%
Independent learning	152	76%
Placement learning		
TOTAL	200	100%

ASSESSMENT

Assessment Component 1

(Tick one)

☐ Written exam ☒ Coursework ☐ Practical

Mode of assessment	Volume	Weighting
Individually Written Academic Journal-style Article	A 2,000 word scientific report on a social impact of climate change, formatted as an academic journal article using a provided template to create an issue of an [edited] "class journal".	50%

Assessment Component 2

(Tick one)

☐ Written exam ☐ Coursework ☒ Practical

Mode of assessment	Volume	Weighting
Group Campaign Presentation with supporting material	Each individual in the group to contribute 2 minutes to the campaign presentation. Each individual to contribute 500 words to the supporting materials (max 5 in a group)	50%

Assessment Summary

Activity type	Percentage
Written exam	
Coursework	50%
Practical	50%
TOTAL	100%

Module Code	ACNB4005
Title	Field and Laboratory Skills
Date	02/03/2023
Level	4
Credits	20
Pre-Requisites	None

AIM(S)

- To familiarise students with the underpinning practical field and laboratory skills such as species ID, surveying techniques and mapping.

LEARNING OUTCOMES

Upon the successful completion of this module, the student should be able to:

- Demonstrate a fundamental knowledge of lab safety and hygiene practices, including how to preserve specimens and eliminate cross-contamination.
- Understand how to perform a variety of practical conservation skills in the field.
- Understand better how to design practical experimental design.
- Have a fuller understanding and appreciation of their other learnings thanks to hands-on experience.

INDICATIVE CONTENT

- Learning the Scientific Method
- Introduction to lab safety and hygiene. Carrying out risk assessments
- Lab work including soil sampling, water quality monitoring, beach litter, etc.
- Basic introduction to GIS, Excel and Descriptive Stats
- Surveying e.g. using quadrats, transects etc.
- ID work – tree species, birds, grasses, lepidoptera etc.
- Field trips with local conservation organisations to carry out practical tasks and to network within the industry
- Use of computer models, both to learn practical skills (e.g. mark-recapture surveying, capture-with-removal, etc.) and using predictive models (e.g. climate trajectories)

Study Time Allocation

The study time for the module is divided as follows:

Activity type	Hours	Percentage
Scheduled learning	48	24%
Independent learning	152	76%
Placement learning		
TOTAL	200	100%

ASSESSMENT

Assessment Component 1

(Tick one)

☐ Written exam ☒ Coursework ☐ Practical

Mode of assessment	Volume	Weighting
Fieldwork Notebook	Students are required to complete a working Fieldwork Notebook, which will include their methodologies and observations from their practical work (2500 words).	60%

Assessment Component 2

(Tick one)

☐ Written exam ☒ Coursework ☐ Practical

Mode of assessment	Volume	Weighting
Fieldwork report	Students are required to complete a report of a field work trip which explores and analyses the processes and outcomes of conducting field work with a specific conservation focus (1500 words).	40%

Assessment Summary

Activity type	Percentage
Written exam	
Coursework	100%
Practical	
TOTAL	100%
