

# Insert Hyperlinks in PowerPoint

This will explain how to insert/use Select text or object in PowerPoint presentations with clear text. How to start link, understand each way: You must first access Google and log in to PowerPoint to get started.

1. You must first log in to uwtsd hub. After you must open Office 365 and go to PowerPoint. Once you open a fresh powerpoint you can proceed further.

## 2. Select text or object

Right-click, locate the hyperlink in the menu. PowerPoint and paste your URL, then click OK. Checking the link and its confirmation notification. Verify a better secure or vulnerable. Hyperlink brings image magic.

## 3. Paste or choose 'Hyperlink.'

Now, double-click and enter your screentip. Once the screentip is entered, you can paste the link from the website. The address must be correct to enable the user to proceed to the webpage via the sreentip.The inserted screentip will appear in blue and underlined.

## Instructions

To recap, you must first log in to uwtsd hub. Then you have to open Office 365 and open PowerPoint. From there, you will go on to the insert tab, select text, a shape, or an image, then click Insert/Link (or use Ctrl+K). Choose to link to an external website, a file, an email address, or a specific slide within the presentation, and insert the address. You can also change the text to display what name the link comes under. To add a hyperlink in most applications (Word, PowerPoint, etc.), highlight the text or image, right-click, and select Link. Paste the URL into the address box and click OK.
