Coursework Part E

Presentation and Reflection

Motorsport Engineering
Term 1 reflection presentation

Highlights of term 1

Meeting new people

Term one of university allowed me to create and meet a new friendships group with people that have the same passion as me. The friends I have made have the same passion for my hobbies and things I like creating a good atmosphere when in uni.

Msport ENG

Msport ENG is the race team run by UWTSD and it allows for students to work on the car and be the race team. I entered the team as soon as I heard about it and I haven't looked back. It is everything I wanted when coming to uni.

Learning new skills

Being taught how to use solid works has been one of the best highlights of the first term. I have used similar programs before but I haven't designed things that I wanted. The course I am doing allows me to design parts of cars which I am interested in and doesn't hold any limitations to my imagination. It allows me to grow and learn more about the subject and also the program

Areas I want to improve

Maths

Improvements for maths include looking over notes and work that I have done in lectures more frequently and efficiently but also attend extra lectures to get extra tuition if I am struggling.

Physics

Improvements for physics are similar to the ones in maths only the difference being going out and maybe investigating my own experiment that I have come up with to help me learn the equations even better.

Academic writing

Improvements for academic writing include improving my paraphrasing. I have learnt the basics and understand them, however I still think I could improve on how I evaluate and conclude on the paraphrase.

Introduction to automotive engineering

Improvements for this subject include practicing on solid works when not in lectures and practice creating my own dimensions to help me when I am given dimensions. It helps I enjoy creating things on this solid works so i will be more motivated.

Areas I am strong in

Maths

My strong points in maths include me remembering some of the work from my GCSE maths classes. Also, we are mainly studying algebra which I enjoy and find interesting.

Physics

My strong points in physics include that the subject interests me and I find it fun learning about the subject. Also, learning Pythagoras theorem and using sin, cos and tan to work out angles hasn't bored me like I thought it would.

Academic writing

My strong points in academic writing include completing my assignments with good quality work and making sure I don't leave assignments until the last minute.

Introduction to automotive engineering

My strong points in this subject include having experience with similar types of programs (pro desktop) and finding the program and the creation of my designs easy to manage. I also really enjoy creating designs that are either assigned to me, or ones that I come up with in my spare time.

Conclusion

in conclusion I believe that this first term of university has gone very well in terms of lectures and learning, but also outside of uni like with me new friendship group. Both these sides of "the uni life" have been a lot better than I ever could have expected. The Msport ENG race team I have joined has made the experience 100X better as it is what I want to get into after I have graduated and left uni.

However there are still some parts that I need improving. One improvement is certainly revising and completing work. I keep procrastinating and leaving the work till late when I could have easily done it with no stress.

FINAL GRADE

13/20

GENERAL COMMENTS

Instructor

Remember to include your name on the title slide.

You do not appear to have included any presenter notes, which was part of the assignment brief. This means that some of your slides have got too many words on them.

You have reflected well and looked at areas that require improvements, as well as things that have gone well. I am pleased to see that in some cases you have thought about how to make improvements too.

You need to proof read your work as there are grammatical and punctuation mistakes.

In terms of the assessment criteria, I believe you fall in the 60-65% bracket, which says the following;

- Sound evaluation of the underlying concepts and principles.
- Ability to devise arguments using evidence to make mostly appropriate and valid judgements.

Mark Awarded

13 / 20 = 65%

Overall Coursework Mark (including Parts A, B, C, D & E) = **71.1%**
