what report?

5/25

We are living in a digital world. In the modern world if we want to live happily digital skill are most essential to learn. According to the report 126 million youngster in the UK are facing digital skill crisis. We are having great support for our Moodle Enterprise 21st century from the Digital skill and research method Moodle. We got lots of support from the website for example we develop our business advert by giving the website. It is a huge publicity for our business Tiffin express. Our customer gets easy access to our website and find lots of information about the fast food Tiffin express, they can read our menu and chose delicious dishes before the order.

When we start our Moodle Digital skill and research method I didn't know how to perform in the computer. Basically I learnt lots things from this Moodle. At the beginning I learnt how to set up an email address. Soon after we learnt how to design a website, also I learnt lots about Webley website. Learning Gantt chart was little bit challenging for me because it was completely new to me. I never have such a work like this. But I am really glad to learn it. I design our business proposal for our business Tiffin express. I find web link done a big role for it. As a group I and my business partner Khalil and choral we done multiple questionnaire for the customer fit BAC. We create a question for the customer choice. As a group we create our business logo through the website. Our business tiffin express located in the heart of Swansea. IT is an ideal location for the all type of customer. There are hues passing trade as well. We together design our business sign through web link. For our business Tiffin express I internal design from the web link. I think we needed to start at the beginning of our course. Digital skill are very important for all courses. Thank you.

This is more aligned to a reflective blog of the module rather than answering the question set.

Take care to ensure that you follow the question requirements. You were required to write a short account explaining the key elements of the website designed in-class (and linked to the managing enterprises module).

See attached example.

Blog

Double check your spelling, grammar and punctuation.

You are quite bulletted in your blog, when a more reflective approach would have benefitted the submission. That being said, there ~~are~~ some areas that do attempt to do this.

Some of the blogs are somewhat brief. Although that being said, you have included information related to the session. However, you need to be more reflective.

You should have encouraged others to complete it with the link provided.
You copied and pasted an example of your questionnaire
Check the spelling of your teammates names prior to submission
