Diabetes:

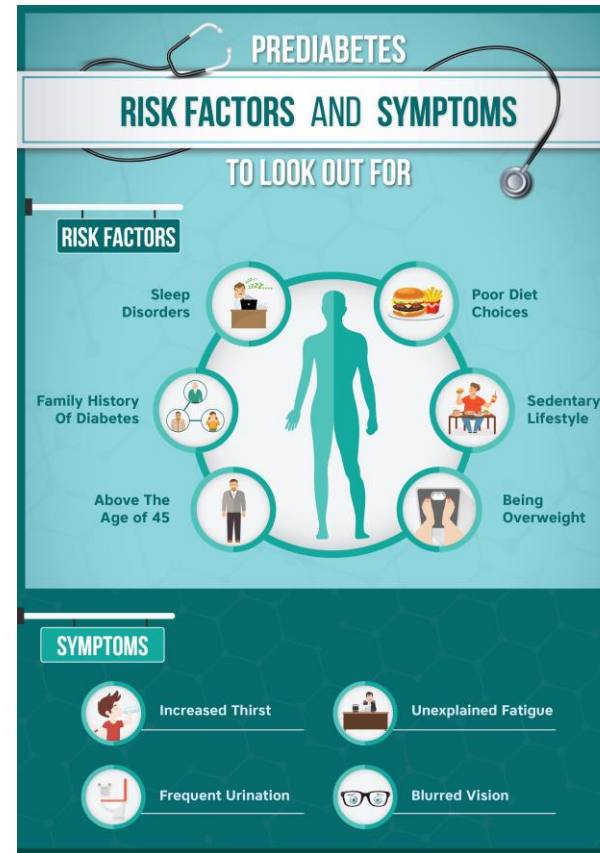

Diabetes is condition which the body doesn't measure food to use as energy it tends to be characterize a portability to create or react to the chemical insulin is debilitated. Which comes to result to unusual digestion of carbs and lift levels of glucose in the blood(Wilson,2021}.

There are two type of diabetes

- 1) Type 1 diabetes- can be developed at any age, commonly found in children and adolescent.
- 2) Type 2 diabetes- Most common diabetes case, mostly found in adults.

Symptoms of diabetes

1. frequent urination
 2. Excessive thirst
 3. Unexplained weight loss
 4. Extreme hunger
 5. Very dry skin
 6. More infections than usual,
- William etal, 2017}

Diabetes (type 1 vs type 2)
Insulin production
(**type 1**) - the body does not make enough insulin
(**type 2**)- the body cannot use insulin properly
Age at diagnosis
(**type 1**) – usually age 0-40
(**type 2**) – mostly 40+
