

Challenge 1: HDD Challenge

Theme: Cooperate data theft

Device: UnionShine

**Contributors: John, Ellis, Rohan, Dawid, Lara, Nitheesh Kaliyamurthy,
Munyaradzi Murrira**

Scenario

An online dating company called Red Hot Passion has received veiled threats that confidential information such as Payment information, Names, Address, Job positions, Photographs stored in database documentation as well other communications via text messages emails, videos could be leaked by unknown source.

This information is so sensitive due to the nature of website that provides a platform for married adults to engage in infidelity. This is an invasion on the user's privacy who trusted that website would confidentially retain their information. A lot of the users of the website are work in high positions of importance such as at working fortune 500 companies and working in high-end managerial positions who could be under pressure of firing if this information was leaked as well as effecting their security of their marriages.

It is believed that serval employee/employees of administration staff could have potentially had access to this sensitive information and that they have left the company recently. These employees could have potentially been disgruntled and could have had reasons to want to take revenge against the company due to previous payment disputes.

We have identified an HDD found hidden away on one of the desks stored in the office building that is not in use.

Challenge for specialist team

We request your team to uncover any evidence related to the above concerns, making sure, during your analysis you provide data integrity, as such the evidence can be presented before the court of law ensuring that the culprits are made liable for breach of the companies' data policies and potential cyber terrorism against the company.

The integrity of the data is important as this information may need to be used in a trial in the future.
