| <b><u>First Marker's General Comments and Original Mark</u></b><br>The report is confidently written and presented well. Despite this, more proof reading would have helped eliminate the errors which are present. On the whole, a good range of suitable sources are cited. On occasion, additional references and additional research are required but not included in areas such as development environment and effective UI design. The application itself is fairly. Discussion is made of the existence of a local data store. The report does not contain any algorithm or input, process, output design to indicate what functionality this brings. A good body of knowledge is demonstrated. Some gaps in understanding are also highlighted. Results are summarised succinctly. Conclusions and reflections are insightful. | <b>67</b>     |
