

Research Participation Log 2017/2018

Level 4 Research
Methods (ECPS4001)

Study One Study Code:

Study Code:

1) Was the BPS Code of Human Research Ethics followed? (E.g. was informed consent gained? Were you aware of your right to withdraw? Was confidentiality upheld?)

Yes ☒

No ☐

If not, which guidelines were not followed?

Describe how the ethical guideline were followed?

I was presented with a consent form on arrival, followed by an explanation of my right to withdraw from the study at any time. After the study I was given a de-brief form to read. Confidentiality was upheld throughout.

Note:

This image shows a single sheet of white paper with horizontal blue or grey ruling lines. The lines are evenly spaced and run across the width of the page. There is no text or other markings on the paper.

How were you fully debriefed after completing the study? Were you given opportunity to discuss with the researcher after completion?

On completion a de-brief appeared on screen, this explained the nature of the study and details of who to contact with any questions or concerns. As this was an online study I was not able to discuss the study with a researcher face to face.

Are there any areas of improvement for this research study? (think about the materials used in the study and how the researcher carried out the study)

once exiting the study I was unable to access the de-brief information again and found this a little frustrating as I was inclined to read up about the study again but was unable to.

Name (PRINT): _____

Date: _____

Briefly describe/outline the study you participated in (What were you asked to do? Did you understand the purpose before/during the study?)

I was asked to complete two short questionnaires relating to SID's and it's potential causes. I did not know the purpose of the study until the end .

Briefly describe your experience of taking part in this research study (positive aspects/issues that may have impacted your participation)

Whilst attending my first study I was slightly apprehensive as I didn't know what to expect but also because this study was related to a sensitive subject. I was made aware of this before signing up and again on arrival. The researcher was friendly and made it a relaxed environment.

How were you fully debriefed after completing the study? Were you given opportunity to discuss with the researcher after completion?

I was given a de-brief form as well as having the purpose of the study explained to me and offered information about further support if needed.

Are there any areas of improvement for this research study? (think about the materials used in the study and how the researcher carried out the study)

As the researcher explained everything clear and confidently I felt at ease. The questions asked were well thought out and arranged in a sensible order. I do not think there could be any improvement.

Briefly describe/outline the study you participated in (What were you asked to do? Did you understand the purpose before/during the study?)

The study was an online questionnaire, consisted of six pages of ten questions relating to legal immigration in this country; this took fifteen minutes to complete.

Briefly describe your experience of taking part in this research study (positive aspects/issues that may have impacted your participation)

This study was easy to take part in as I was able to do it from home. I felt that this set up would allow for participants to answer accurately without feeling as though they would be judged, however, there was no rush to complete the survey and so, participants would also have the opportunity to think about their answers.

Study Three Study Code:

Study Code:

1) Was the BPS Code of Human Research Ethics followed? (E.g. was informed consent gained? Were you aware of your right to withdraw? Was confidentiality upheld?)

Yes ☒

No ☐

If not, which guidelines were not followed?

Describe how the ethical guideline were followed?

A short summary of the study was presented with a button to click to confirm I consented to participating.

Note:

This image shows a single sheet of white paper with horizontal blue or grey ruling lines. The lines are evenly spaced and run across the width of the page. There is no text or other markings on the paper.

Study Two Study Code:

Study Code:

1) Was the BPS Code of Human Research Ethics followed? (E.g. was informed consent gained? Were you aware of your right to withdraw? Was confidentiality upheld?)

Yes ☐

No ☒

If not, which guidelines were not followed?

I was not de-briefed.

Describe how the ethical guideline were followed?

I was asked to complete a consent form and fill in demographic details upon arrival.

Note:

This image shows a single page of white paper with horizontal blue or grey ruling lines. The lines are evenly spaced and run across the width of the page. There is no handwriting or other markings on the paper.

How were you fully debriefed after completing the study? Were you given opportunity to discuss with the researcher after completion?

I was not correctly de-briefed for this study. I was not handed a de-brief form nor was any information presented upon completion. The researcher did not offer any time to discuss the study, she moved straight on to the next participant.

Are there any areas of improvement for this research study? (think about the materials used in the study and how the researcher carried out the study)

I felt the design of the study was well thought out and an adequate distractor presented. I do feel that the experience could have felt much better had the environment been quiet.

Name (PRINT): _____

Date: _____

Briefly describe/outline the study you participated in (What were you asked to do? Did you understand the purpose before/during the study?)

This study involved completing a short paper questionnaire about my personal emotions at that time, followed by a distractor task of shape sorting and again completing the same questionnaire.

Briefly describe your experience of taking part in this research study (positive aspects/issues that may have impacted your participation)

The researcher explained everything well, however although after each task I had to go back and fore to the researcher, where many other participants were stood to alert her that I had finished.
