

Data Mining – Dataset Presentation			
Student	Yan Yinan		
Dataset	Olympics Athletes and Results		
Marking			
Presentation/Slides (Clarity, readability, flow, accuracy, completeness, performance) Generally clear slides, although sometimes the text can be lost against the background image. Good clear voice presentation.			(10 marks) 7
Dataset Description (Where did the data come from? What does the data describe? Is the sample large enough? What data formats and types are involved?) Good description of the origins and contents of the dataset.			(50 marks) 34
Dataset Suitability (What features of the dataset lend themselves to data mining? Has it been mined previously? Why does the student feel that they have the contextual background to work with this data?) An interesting dataset. There is scope for using aggregated data as well as individual data, e.g. taking average values for a team in team sports. Passion for sports is a good justification for selection.			(20 marks) 15
Objectives (What does the student plan to investigate/expect to find? Are these SMART?) A good set of questions with scope for further exploration			(20 marks) 15
