

Digital Safety

Digital safety in work place :

Digital safety for children :

Children are exposed to digital devices at an early age.

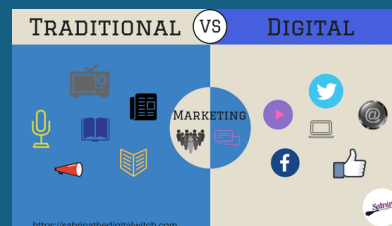

All parents are concerned about their child's digital safety:

Factors that helps:

- ensure age restrictions and identity verification
- Limiting online access (1-2 h)
- Restriction to use social media platforms for children's with inappropriate age.

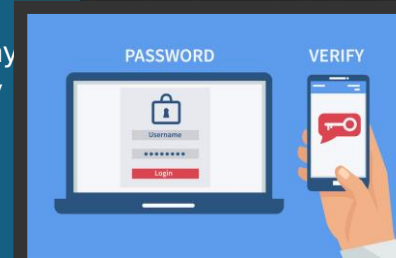

Together with the digital evolution, the modern workplace has inevitably changed

Example of digital safety

- **Secure Networks (VPN):** Companies use VPNs like NordLayer to protect remote connections, ensuring data integrity when accessing corporate systems from outside.
- **Two-Factor Authentication:** Implementing 2FA via apps like Google Authenticator or Duo adds an additional security layer to workplace systems, widely adopted in industries dealing with sensitive data.
- **Phishing Training:**

Digital safety in public place :

Today digital safety is crucial for protecting personal data from cyber attacks.

Example that helps you to avoid this :

1. Avoid using public Wi-Fi for sensitive transactions.
2. Protect passwords and personal information by ensuring no one can see your screen in public
3. Bring a power bank or USB data blocker to prevent "juice jacking" attacks.
