Helo, fy enw I yw Darren Evans ac heddiw rwy'n mynd I siarad am yr effaith mae amser sgrin yn cael ar iechyd meddwl. Mae sgriniau'n rhan enfawr o'n bywydau beunyddiol yn enwedig gyda ei'n ffoniau a gliniaduron ac mae llawer o bobl ifanc yn gwario 7 awr y dydd neu fwy arnyn nhw. (Price, 2025) Mae technoleg yn dod a llawer o fanteision ac mae'n bwysig I ddeall sut maent yn gallu effeithio ar ein iechyd meddwl.

tymor byr

Mae amser sgrin ddim bob amser yn negyddol. Mae'n helpu pobl gadw mewn gysylltiauidd gyda'i gilydd enwedig trwy cyfryngau cymdeithasol ac negeseuon, sydd yn gallu lleihau teimladau o unigrwydd. Yn ogystal ac hynny hefyd mae yna appiau iechyd meddwl ac cymunedau ar-lein sydd yn gallu darparu cymorth. Ar ben hynny mae sgriniau yn rhoi mynediad I ni am addysg a helpu ymlacio. Mae'r ystadegau wnaeth Ffion ddarganfod am yr effaith cadarnhaol sydd gyda amser sgrin yn pwysleisio'r pwynt fod amser sgrin yn gallu fod yn un bositif wrth ddefnyddio yn y modd cywir.

Anghydbwysedd
Dopamin

Fodd bynnag, mae gormod o amser sgrin yn gallu cael effaith negyddol difrifol. Mae ymchwil yn awgrymu fod amser sgrin yn gysylltiedig a levelau uchel o pryder ac iselder, enwedig mewn pobl ifanc. Gall ddefnyddio sgrins hwyr yn y nos effethio ar cwsg oherwydd golau glas sydd yn effethio ar hwyliau a chanolbwytio. Gan adleisio beth ddywedodd Amy mae cyfryngau cymdeithasol yn achosi cymhariaeth gyson gyda pobl ifanc sydd yn gostwng hunan barch wrth iddyn nhw sgrolio trwy Instagram a Facebook.

Darren - Ystadegau

- More than 1 in 10 adolescents (11%) showed signs of problematic social media behaviour, struggling to control their use and experiencing negative consequences. Girls reported higher levels of problematic social media use than boys (13% vs 9%).
- Over a third (36%) of young people reported constant contact with friends online, with the highest rates among 15-year-old girls (44%).
- A third (34%) of adolescents played digital games daily, with more than 1 in 5 (22%) playing for at least 4 hours on days when they engage in gaming.
- 12% of adolescents are at risk of problematic gaming, with boys more likely than girls to show signs of problematic gaming (16% vs 7%).

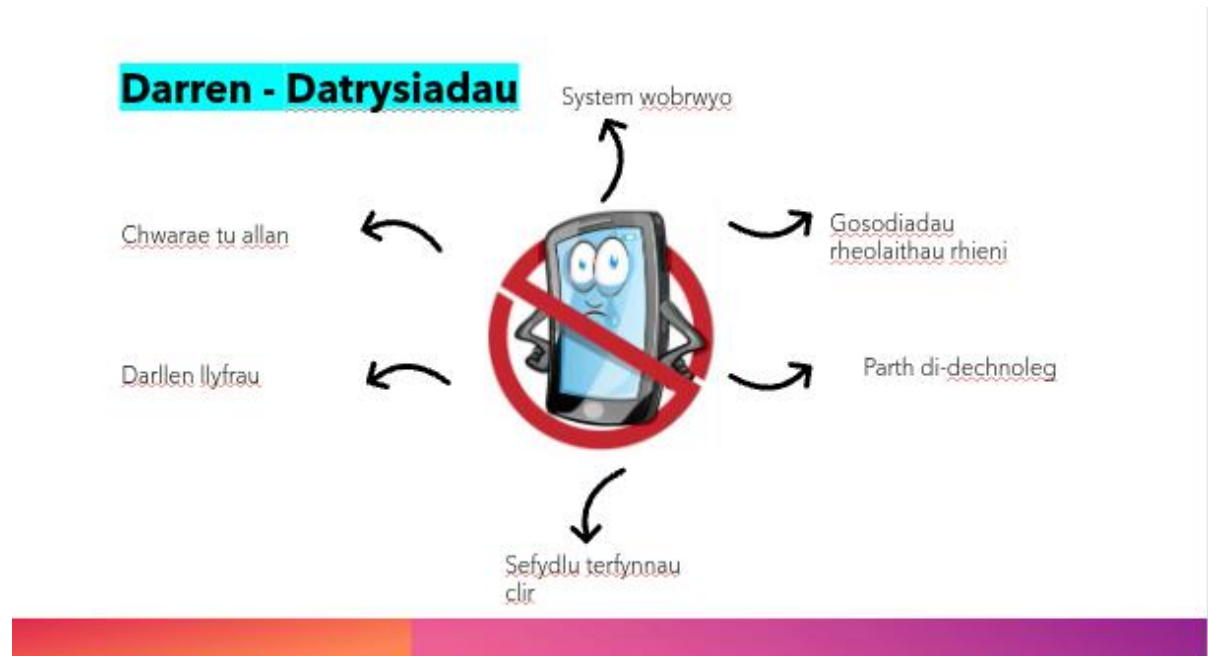

(World Health Organization, 2024)

Mae'r ystadegau hyn yn dangos bod defnydd o gyfrangau cymdeithasol a gemau ar-lein yn cael effaith sylweddol ar bobl ifanc. Mae nifer fawr o blant yn dangos arwyddion o ddefnydd problematig, sy'n gallu arwain at ganlyniadau negyddol fel diffyg rheolaeth a phroblemau

emosiynol. Yn ogystal, mae llawer o bobl ifanc yn cadw cysylltiad cyson a ffrindiau ar-lein, ac mae rhai yn treulio oriau hir yn chwarae gemau. Mae hyn yn awgrymu bod angen mwy o ymwybyddiaeth a chefnogaeth I sicrhau defnydd iach a chytbwys o dechnoleg.

Felly, y neges allweddol yw cydbwysedd. Lleihau amser sgrin, cymeryd seibiannau ac mae osgoi sgriniau cyn gwely yn help fawr. Ma gwario amser gyda pobl arall yn hollbwysig. Yn gyffredinol ddim amser sgrin yw broblem ond faint o amser ac sut ni'n ei ddefnyddio yw beth sy'n bwysig. Mae hyn yn cael ei bwysleisio gan Proffessor Przybylski yn ei ddarlith o Sefydliad Rhyngwryd Rhydychen "In light of our findings, calls for blanket technology bans and age restrictions on technology access do not constitute evidence-based or indeed ethical advice, particularly as screen usage in some cases has a net positive impact." (www.oii.ox.ac.uk, n.d.)
