

BASIC DIGITAL SAFETY

How to stay Safe online

1

Make sure you internet connection is secure

Unsecure internet connection makes it easier for hackers and viruses to hack your software and device system, make sure your internet is safe, secure and legit to prevent this from happening.

2

Make sure your passwords are strong

Have strong passwords, reason being common or easy to guess passwords would be much more easier to figure out and easier to get into your software and devices and even your personal data.

3

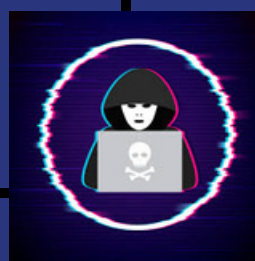

Check the websites looks reliable and legit

Hackers create fake websites to make it easier to get in your softwar, with this they could make a fake device or send you fake links and you could even download apps what have bugs on them or what are not legit . Once you click these links or sites it makes it that much easier to get into your device system, you're basically opening a door.

4

Make sure your device is secure and up to date

Make sure your device is secure and up to date, make sure your always updating your device so your device system can check for bugs and to make your device even more secure you could download a VPN.

5

Be careful what you post and where

Anyone can take your post and pictures you could easily be posed as and for their own personal gain. Also be careful of what information you put on your post and account as this could also be used to catfish you and also for your own personal safety.

!

why should you care about your digital safety

- identify theft
- software hacking
- phone system hacking
- theft
- broken software
- personal and physical safety
- blackmailing
- harassment

these are just half of the reasons digital safety is so important.
