

Traditional teaching style which can be enhanced and enriched by technology.

Core Enhancing Technology

Key Enhancements

- **Flexibility** — recording presentations allows for flexible and repeated access.
- **Context** — capturing annotations and session activity provides context to materials.
- **Engagement** — video can be provide a simulating information resource.

Teaching and Learning Ideas

- Where traditional oral delivery of information is most appropriate, record that delivery using Panopto so students who missed the session, or who failed to fully understand during delivery can watch the recording as many times as required.
- If using Powerpoint to deliver a session, running it through Sony Vision Exchange allows discussion on slides to be annotated, captured via the screenshot tool and then made available to students for revision and reinforcement, providing more context than if the original slides are shared.
- Clickview provides a library of educational video, plus the ability to access any programme aired on the main Freeview channels in the last 28 days—a valuable resource for finding video on a range of topics. Video can also be played to a class by streaming from any device connected to wi-fi via Sony Vision Exchange.
- Teaching from Moodle—i.e. visibly using your Moodle page to access the various resources used during a session—can strengthen the link between the live and online experience, signpost those resources and encourage students to access them for reinforcement following the live session.
- Skype for Business can be used to bring the expertise of guests into a teaching session without the need for expensive and time-consuming travel.

Try Also...

“Back-channel” tools such as Today’s Meet or Twitter can allow students to pose questions without disturbing a the flow of a presentation.
