

THE SURVIVAL OF LIFE - draft one

This project highlights the key word "survival", exploring through what we must do to survive in our everyday lives. This society has a pattern creating structure to ensure that we can live into that idea of what life is. Since the covid and the pandemic life had shifted dramatically causing a change in the world. Covid is a disease that strands back to the Chinese City of Wuhan in 2019, which then led to spreading to the middle East and Europe. Covid had affect the world so much that people are separated from social situations, jobs, hobbies and are even limited on how long or how far they can go outside. These circumstances are a realisation on what we take for granted in our daily lives, creating a tear into the structure of life. Even the loss of relative and friends had increased dramatically through these challenging times. Not only that had happened, once the pandemic has ended normality would slowly irrump however, nothing will also be the same as before.

What Is surviving a pandemic? The pandemic had given a greater impact on the Global Economy. Creating a decrease unemployment in the work industry around the world. The Uk had to really on their jobs to survive in the Pandemic. Employers and shops were struggling to keep their companies with full support of luck, to not have their companies on Life support or tragically going out of business. According to the BBC News the unemployment rate in the UK in 2019 was "3.8%" then dramatically increased by 2.2% in 2020 giving an overall "5.4%" in the past year. Which shows the effects of what the pandemic had on the work industry and how people had to survive without a job or adapting to their current change in their jobs. The absence of jobs that has furloughed people in the UK is predicted around "eight million" from the article Frontiers in Psychology. This article of study was investigated towards the impact of change with employers that struggle with mental health issues, financial issues, and health issues that are surviving from the pandemic. The restrictions of travelling during the lockdown was limited due to the unwanted spread of Covid-19. The International Travel companies has faced many bankruptcies and has shown a decrease in flight bookings throughout 2019 and 2020. The BCC News had resourced from Flight trader that in 2021 International flight are profiting over 50K, in 2020 the average amount made was under 50K however, in the 2019 the average amount made was in between 100K and 150K. This shows that many companies that really on the popularity of travellers or the community are hugely affected by the pandemic forcing them to struggle. However, the Health department had upcoming issue of staff shortage that are risking their lives for covid patients. The NHS in England had a huge shortage of "100,00 doctors" and "40,000 nurses" according to an article The Guardian. Which had a significant impact in the health care industry as they were not prepared for this outbroke and had lost a lot of staff due to covid. The NHS had struggled to survive in this situation and battling through Covid for the UK to have anormal recovery. This pandemic has tested the survival of what it is like to live in a world where it is a

struggle, where people are strangers and that every day is a reminder of lives that have been lost. Without the Health care that we have been given what would have happened to the UK and how would we go back to normal.

World economies struggling with rising unemployment

The effects that the pandemic has also created is that artist is struggling with their projects just like the rest of the world. Even if the artist is quite unsociable and like to create work at studios the lack of inspiration can toll on their creations. Covid- 19 had forced galleries to close their doors. Art behind closed doors have repropose to a digital platform to take a more positive force during these tuff times. The impact on the Creative industry estimates a loss of £743 million (9%) and a 5% of jobs decrease according to Oxford Economics for the Creative Industries Federation. This is a struggle of the art industry and how they can peruse their upcoming work. This is because of the reliability of gallery's that toll on artist lives as art byers are out of the scene and are facing acute hardship. This was a struggle for a lot of artists, but some had turned that disadvantage to an advantage. An example of this is Aliza Nisenbaum a New York artist who focus on a series of paintings that are dedicated too key workers in Liverpool. This is a capture of the stories that the frontline of the NHS workers and outlines what the effect of Covid 19 has had towards their lives and their homes. This artist has shown the appreciation that the UK has towards the NHS workers as they have strived to keep our country safe and Covid free. The stories behind these paintings are too represent that they are only human and still they pursue these challenging times with ambition to achieve. Aliza Nisenbaum had focused one of his series towards" a respiratory doctor who became a father during the first wave, and a student nurse who comes from a family of nurses who all chose to return to frontline work" stated by Exhibition at Tate Liverpool Aliza Nisenbaum.

This is a representation of how life can change and how responsibilities can climax to the extreme and most of the key workers have managed to create a stable foundation for the UK to survive. This artist has clearly shown who has done that for this country and shined a new prospective for these people. Around August, Nisenbaum

had selected Key workers from Liverpool too talk to them online to discover their personalities and elements of interest so that he can establish a part of them of them in his paintings. These series of paintings have been put into the gallery supported by Tate Liverpool Commissioning circle for visitors that will be able to see a large scale of individual portraits.

Lock down has not had a huge positive impact on this world as Covid-19 had only brought despair and a heavy weight of sadness and death. However, the only positives that it had brought to us is that the Global warming and air pollution had improved. Which shows that there is hope in saving the world from pests and diseases and frequent floods, also the reduce of food in the near future. Global Warming is not an unfamiliar topic, but recent studies shown that because of the pandemic we have had a significant breakthrough. Which again leads to the topic of survival for our world because of this deadly disease, society has seen a greater impact on what we can do for Global Warming. Due to the decrease in Economic activity, it has effected Global warming positively. As we discover that the meteorological variations that lockdown created, we find that the population has lifted the concentration of nitrogen dioxide to a standard of “60% in 34 country's “according to PNAS. Which shows the positives of how we can act on this discovery and being able to mangle to reduce this problem. With that information we should rely on the idea of improving our global issues in order for the future to survive as we had survived this pandemic. However, this is the only positive that we face throughout this lockdown experience as it has effected people in ways, we wish we couldn't imagine. People lives had been taken away because of this Covid leading up to “126K of deaths” so far according to the daily change. Which shows that this pandemic has been more of a negative impact towards the world than what other problems we had faced over recent years. Having that many losses is a difficulty that many people had to face and blame the disease that brought this despair.

In conclusion the survival of the pandemic and Covid had resulted in many ways implementation the world that change. The society has been challenged in living and surviving for this pandemic, losing and gaining life experiences throughout 2019-2021. This is a survival of our lives and what had changed them with remembering what the norm before all of this was had happened. Struggle was a huge part in this for many people around the world that had lost many important things in order live such as Jobs, Family, Friends, education and health is what people had lost through this experience. Which leads overall Covid has changed what society is now and will never be as we have been restricted from our lives and the freedom that we had once will change due to the loss of the world's economy. This time is a state of emergency to survive as it had effected the psychological health of the population all over the world and effects the routine of everyone's lives as we speak and when everything is in the state of 'normal' it will never be the same as before.
