

GIG-ASSIGNMENT 2-POSTER

BASIC DIGITAL SEFETY

1:If you want to be secure in public places its best not to log in to the free connection, because they can get in to your computer very easily and they will be able to do whatever they want.

2:Never store your phone at a corner store because this can also be a big danger for you.

You can be in danger even in your home and not know when someone might steal the information from your computer so to prevent this form happening you don't have to give the information to someone if they call you and ask for it sometimes they can say its someone from your bank but many times its not like that.

Never post your information on online accounts, such as your date of birth, your home address, your family names or your house number, because they would use this very easily to connect to your accounts and steal everything they can
