DIGITAL SAFETY

PERSONAL INFORMATION

A lot workers or customers may need to know about your skills and how to get in touch with you. But they do not need to know your personal sensitive information and any time you buy online. Realize that scammers most easier to get your personal information. Give them information about bank account to sites that provide security, encrypted documents.

STRONG PASSWORD

Choose difficult passwords are the main thing that can protect you against hackers. The thing with passwords is that people normally choose easy passwords to remember (such as "abcdefg" or "123456"), which are also easy for hackers to guess. Select hard passwords, original passwords that are harder for cybercriminals to hackers to hack your password.

PRACTICE SAFE BROWSING

You should not visit risky websites online. Scammers use fake content as bait. By defending your information, you do not give the hackers a opportunity. Be careful what you download from risky websites. A goal of scammers is to get you into downloading programs that can get your information or apps that carry malware to try to steal your personal information.

BE ALERT ONLINE

It is crucial to know who you are talking online. Secure your Internet connection and device are secure. You could use a VPN connection. If you are not using your device for a long time, turn it off or unplug it.

SAFE DEVICE

It is good to have double steps of security. To have a strong password. It has to have at least sixteen characters. Device should have anti - virus. To use own WI-FI is a best way of security.
