

Process Workbook info

Your process workbook is worth 15% of your overall mark.

The word count is 2000 words (this does not include quotes or referencing)

At level 6 the focus in your written work should be around being **selective** in what you are including. I know this is difficult, but that is the skill you are developing. Being able to be concise in your **thoughts, observations, reflections and conclusions** is an incredibly transferable skill and is very important at Level 6. This piece of writing/PWB should not be a documentation of everything you have done through the project. You may have written lots in your notes, but now is the time to concentrate on a few selected points.

This is your opportunity to highlight moments of **YOUR** process.

You might want to consider some 'titles' or 'headings' of what you would like to highlight as you are planning your piece of writing.

For example you might choose 'the devising process' as something you want to highlight.. Then ask yourself some questions relating to that title in order to springboard into the writing. (Your piece of writing should not be a Q&A or bullet points; this exercise might help you to find some topics to explore further)

Questions such as:

Did it differ from L4, L5 or previous experiences?
Did you enjoy or fear the 'unknown' nature of devising/R&D?
Do you feel you have progressed in your collaboration skills?
How do you think you have progressed?
What did you enjoy?
What didn't you enjoy?
How can this process of creating help you in the future? etc.

Once you have three or four titles or headings you may then choose to either write separate pieces that add up to 2000 words.

Other areas might be:

Responses to the book/piece.
Research.
Research and Development processes.
Your role.
Storytelling and creating narrative. etc...etc.

These are just some suggestions to help you. They are not a template or a 'necessity' simply some points.

Please ensure that you show evidence of wider reading and research quoting books, articles, websites etc that you have looked at.

Process Workbook info

Please ensure you make these quotes or references clear in your writing by putting them in 'inverted commas'.

You can use PowerPoint, Word etc. to present your process. It must be submitted as a file. You are encouraged to illustrate your points with examples from research, and development, as well as the final presentation. You can use photo, video, or audio content.

Your writing should provide a narrative of your process and development during the module. This can be critical and a reflection on events.

Please ensure you add a Bibliography (a list of all the books, websites, articles etc that you have looked at through the process.) This page should be at the end of your Process Workbook and is not included in your overall word count.
