Valley Woods 2009

Screenshots of process

Full screenshot of ArcGIS system used to create map of Penllergare Valley Woods with Ancient Woodland Layer selected

‘Identify’ tool selected which when dragged over a section of map will give details of that area.

The area selected can then be clicked into to show details. This was done for each section of the PVW study area.

Map of PVW with Ancient Woodland and Sealed Main Rivers visible.

Identify function used to identify the river – River Llan

Opacity turned down to show flood zone more clearly.

PVW Ancient Woodland and flood zone layer (DAM Zone C2) which highlights the Riparian Zone of the woods.

Layers that have been used to create the map can be seen here.

Aerial Image of the woods with Ancient Woodland, flood zone and River Llan identified.

Map of PVW showing all European Protected Species (EPS) points as blue dots.

Each EPS can then be selected individually and shown on the map. This example is showing locations of Bats using pink dots.

Map showing all LRC Priority and Protected Species in the study area for PVW. The identify function was used to select the points in the study area and the list of species can be seen in the pane on the left. When hovered, the selected species is highlighted on the map with yellow rings.

Map of PVW showing the Phase 1 Habitat polygons. These polygons were used for the proposed Habitat Management Plan.
