

Very large text for one instructions which makes it easier for users with visual impairment to see the text, one second display contains none and one only text that is on screen is small which makes it very difficult for users with visual impairment to see the text.

The first interface shows elements of affordance as one button or controls are clearly marked and recognizable. Whereas the second interfaces are not very well marked and leave one user guessing.

Another comparison is that both interfaces contain controls with large text which makes it easier for visually impaired users to see the controls.
