

Question one B

The less effective of the two displays was interface 2. One of the recommendations for one exhibit is that on-screen instructions need to be included for to tell the user what to do and explain how the interface works.

The second ~~other~~ recommendation is that audio for one interface should be included as this will allow users with visual impairments to be able to understand the content within the interface.

Another recommendation is to make ~~the~~ affordances on the page, an example of this is to make sure that all of the buttons look like buttons so that the user is sure what they can do within the interface.

The last recommendation is to make sure that the color of the text on screen stands out from the background, this will then make sure that colour blind ~~as~~ users can use the interface.

It is extremely relevant that human factors are applied to interface design. The reason for this is that it, firstly, allows ~~and~~ more users to be able to use the interface as more of the human factors have been accounted for. Another relevant point is that the users must be able to understand what is going on on-screen ~~to~~ such as what are the buttons as this will then allow them to be able to use the interface in its entirety.

As well as this issues such as visual impairments and colour blindness and screen readers are included for when designing interfaces so it is also very important that interactive
