

# The Electronic industry

## What is the electronic industry?

This industry helps produce our everyday equipment to help us communicate, work, and live our everyday lives. This industry is very fast paced as technology is growing rapidly and there's a high demand in the market.

Covid 19 showed the importance of the electronics industry as implementation of lockdowns kept everyone at home so there was a high demand for electronic for example 'Nintendo increased production of switch to meet blooming demand' symbolizing the impact electronic has on our lives.

Some of the basic components of the switch are

- Transition from a console to handheld device
- Joy con controllers which you can separate from the console contains '1.9Wh lithium-ion battery allowing 20 hours battery life'

This is just an example of 2 of the many components a Nintendo switch uses. however, if you look into something like a computer, it is made up by a number of components to help it function.

"Computers themselves, and software yet to be developed, will revolutionize the way we learn."

## The ongoing war between iOS and android

iOS software and android software are two operating system they both power many mobile and electronic devices the same as windows where it powers different brands like Lenovo, Asus, and Microsoft surface laptops.

iOS and android are the two biggest giants in the electronics industry.

iOS supports only apple products whereas Android supports brands like Samsung, Sony, Oppo and Motorola etc.

Some people compare the two because of their features for example iOS 'regularly update their features and bring in more security enhancements to keep your iPhone up to date'.

However, some may argue and say android is more up to date as they were the first company to introduce biometrics software on their Motorola where apple had followed after and bought it in on their iPhone 5s.

Biometrics software confirms a person's identity based on characteristics like fingerprints, facial patterns and voice.
